Status of the course in the study program:

Core course of the study for Technical Physics, Faculty of Technical Physics.

Assumptions and objectives of the course:

The course is intended to provide the student with the mathematics he needs for advanced study in physics and engineering science

Contents of the course (course description):

curvilinear coordinates, differential vector operations in curvilinear coordinates, the Kepler problem. Calculus of variations ? one and more then one dependent and independent variable. Functions of a complex variable ? Cauchy?s integral formula, Laurent expansion, Special functions. Tensor analysis in differential geometry, in electrodynamics, in special and general relativity. Fourier and Laplace transforms

Introductory courses and the required pre-knowledge:

The knowledge of mathematical analysis, algebra and physics.(the core course)

Courses form and teaching methods:

lecture + classes

Form and terms of complete the course - requirements and assessment methods:

Written and oral examination
