Status of the course in the study program:

Development of Product Safety

Assumptions and objectives of the course:

The course aims to acquaint students with problems associated with the development of product safety. The student learns about methods of identification, criteria, and categories of dangerous products.

Contents of the course (course description):

Definitions of product safety. Applicable product safety signs and the authorities responsible for their observance. Characteristics of hazardous products. Ways to improve the safety of products and issues related to the imaging of the potential risks that lead to a dangerous situation.

Introductory courses and the required pre-knowledge:

Basic knowledge about materials and manufacturing techniques.

Courses form and teaching methods:

Multimedia lectures, exercises and demonstrations, project seminars.

Form and terms of complete the course - requirements and assessment methods:

Examination, integrative test of material, and a project.

Basic Bibliography:

Additional Bibliography:
