STUDY MODULE DESCRIPTION FORM

Name of the module/subject		Code
Numerical Analysis		**1010102121010111980**
Field of study	Profile of study (general academic, practical)	Year /Semester
Civil Engineering Second-cycle Studies	**(brak)**	**1 / 2**
Elective path/specialty	Subject offered in:	Course (compulsory, elective)
Structural Engineering	**English**	**obligatory**
Cycle of study:	Form of study (full-time,part-time)	
Second-cycle studies	**full-time**	
No. of hours		No. of credits
Lecture: **2** Classes: **1** Laboratory: **1** Project/seminars: **-**		**2**
Status of the course in the study program (Basic, major, other)	(university-wide, from another field)	
(brak)	**(brak)**	
Education areas and fields of science and art		ECTS distribution (number and %)
technical sciences		**210 100%**

Responsible for subject / lecturer:

dr inż. Witold Kąkol
email: witold.kakol@put.poznan.pl
tel. 61 665 21 06
Wydział Budownictwa i Inżynierii Środowiska
ul. Piotrowo 5, 60-965 Poznań

Prerequisites in terms of knowledge, skills and social competencies:

1	**Knowledge**	Basics of partial differential equations, basics of nonlinear structural mechanics
2	**Skills**	Solving static and dynamic linear problems by the finite element method
3	**Social competencies**	Social competencies

Assumptions and objectives of the course:

A goal is to learn and practise using the finite element method in solving complex nonlinear structural problems (in statics, dynamics and fluid-structure interaction problems)

Study outcomes and reference to the educational results for a field of study

Knowledge:

1. The finite difference method applied to solving nonlinear partial differential equations - [K_W01, K_W03]
2. The finite element method, its implicit and explicit approaches, applied to solving nonlinear structural problems - [K_W03, K_W01]
3. Advanced numerical methods applied to nonlinear static and dynamic problems, contact problems, buckling and post-buckling stability analysis, basics of computational fluid dynamics. - [K_W04]

Skills:

1. Solving advanced practical problems by numerical methods - [K_U04, K_U06]
2. Modeling by the finite element method advanced boundary and initial-boundary problems - [K_U06, K_U04]
3. Usage of a commercial finite element program to practical complex engineering problems - [K_U18]

Social competencies:

1. Student understands needs of cooperation in solving theoretical and practical engineering problems - [K_K03]
2. Student is aware of needs for affordable share their expertise in the field of computationa mechanics - [K_K05]
3. Student sees needs for a systematic deepening and broadening its competence - [K_K01]

Assessment methods of study outcomes

Course description

During a course the finite difference method applied to solving partial differential equations is presented, the finite element method, its implicit as well as explicit approaches, are presented as well. An introduction is given to solving coupled problems, where Fluid-Structure Interaction, as an example, shows one of an engineering problem that is being solved today. Many problems involved today the contact problems: techniques used in solving such problems are introduced during a course as well. Buckling and post-buckling analysis are given also. The basics of the Computational Fluid Dynamic is introduced.
