

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject (Road Materials)		Code 1010101131010123638
Field of study Civil Engineering First-cycle Studies	Profile of study (general academic, practical) (brak)	Year /Semester 2 / 3
Elective path/specialty -	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: First-cycle studies	Form of study (full-time, part-time) full-time	
No. of hours Lecture: 15 Classes: - Laboratory: 15 Project/seminars: -		No. of credits 3
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences Technical sciences		ECTS distribution (number and %) 3 100% 3 100%
Responsible for subject / lecturer: Mieczysław Słowik email: Mieczyslaw.Slowik@put.poznan.pl tel. 61 665 2487 Civil and Environmental Engineering 5, Piotrowo St., 60-965 Poznań, Poland		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	K_W01 The student has knowledge of mathematics, physics and chemistry needed to formulate and solve problems related to construction K_W12 The student knows the rules of industrial materials and building components K_W14 The student is familiar with the most commonly used building materials, their properties, production technologies and test methods
2	Skills	K_U13 The student is able to perform simple laboratory experiments leading to the evaluation of the quality of construction materials K_U17 The student makes use of information technology, Internet resources and other sources of information
3	Social competencies	K_K01 The student is able to work independently and collaborate as a team on the specified task K_K06 The student is aware of the need to raise their professional and personal competences K_K10 The student acts in accordance with ethical
Assumptions and objectives of the course: Familiarize of students with the basic materials used in road construction, production and paving technology and the test methods.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. The student knows the national standards and EN standards in terms of materials used in road construction - [K_W06] 2. The student knows asphalt paving technologies HMA, CMA and WMA (hot, cold and warm mixed asphalt) - [K_W12] 3. The student knows the most commonly used road materials and their properties, production technologies and test methods - [K_W14]		
Skills:		
1. The student knows how to design pavement structures using catalogs - [K_U08] 2. The student is able to design a strengthening of the ground under the road pavement - [K_U09] 3. The student is able to perform laboratory tests of bitumens, fillers, mineral aggregates and asphalt mixtures - [K_U13]		
Social competencies:		

1. Responsibility for the accuracy of the results of their work and their interpretation - [K_K02]
2. Independence in broadening the knowledge of modern research techniques, processes and technologies - [K_K03]
3. Responsibility for the safety of self and team - [K_K05]

Assessment methods of study outcomes

Student knowledge is assessed through a written test, carried out in the last week of the semester.

Grading Scale:

Percentage of points scored - Rating

91 to 100 very good (A)

81 to 90 good plus (B)

71 to 80 good (C)

61 to 70 sufficient plus (D)

51 to 60 sufficient (E)

50 or less unsatisfactory (F)

Students' skills are tested by assessing individually prepared reports concerning performed laboratory exercises

Course description

Lectures

Stone products in road construction

Prefabricated concrete elements in road construction

Classification of the road pavement structure

Principles of designing pavement structure according to Polish catalogues

Materials used in base courses

Bituminous mixtures for road pavements

Road bitumens

Asphalt emulsions

Cement concrete for road surface

Geosynthetics used in road construction

Laboratory exercises

Laboratory tests of basic properties of asphalt binders: penetration and softening point

Determination of elastic recovery of polymer modified bitumens

Tests of mineral fillers used in asphalt mixtures

The study of geometrical characteristics and physical properties of aggregates used in asphalt mixtures

Determination of the stability and flow of asphalt concrete

Determination of compaction index and void content in asphalt pavement layers

Basic bibliography:

5. Wymagania Techniczne WT-2 2014, Nawierzchnie asfaltowe na drogach krajowych, GDDKiA Warszawa 2014

6. Wymagania Techniczne WT-4 2010, Mieszanki niezwiązane do dróg krajowych, GDDKiA Warszawa 2010

7. Wymagania Techniczne WT-5 2010, Mieszanki związane spoiwem hydraulicznym do dróg krajowych, GDDKiA Warszawa 2010

Result of average student's workload		
Activity	Time (working hours)	
1. Preparation for laboratory exercises	5	
2. Preparing laboratory exercises reports	15	
3. Execution of laboratory exercises	15	
4. Mastering knowledge of the implemented Course, including participation in lectures	30	
Student's workload		
Source of workload	hours	ECTS
Total workload	70	3
Contact hours	30	1
Practical activities	15	1
