

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Industrial Water and Wastewater		Code 1010135231010131095
Field of study Enviromental Engineering Extramural Second-	Profile of study (general academic, practical) (brak)	Year /Semester 2 / 3
Elective path/specialty Water Suply, Water Soil Protection	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: Second-cycle studies	Form of study (full-time,part-time) part-time	
No. of hours Lecture: 30 Classes: - Laboratory: 10 Project/seminars: 15		No. of credits 6
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences		ECTS distribution (number and %) 6 100%
Responsible for subject / lecturer: dr inż. Tymoteusz Jaroszyński email: tymoteusz.jaroszynski@put.poznan.pl tel. (61) 6652436 Faculty of Civil and Environmental Engineering 60-965 Poznań, street Piotrowo 5		Responsible for subject / lecturer: dr inż. Alina Pruss email: alina.pruss@put.poznan.pl tel. (61) 6653662 Faculty of Civil and Environmental Engineering 60-965 Poznań, street Piotrowo 5
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Student should have a basic knowledge about water and waste water technology, mathematics, chemistry, fluid mechanics and general knowledge from environmental engineering.
2	Skills	Student should be able to search valuable information and read research articles and reports with understanding. Student should be able to perform mathematical calculations, physical, chemical, mechanics of the fluids and calculation of equipment and facilities of water and wastewater treatment plants.
3	Social competencies	Awareness to constantly update and supplement knowledge and skills.
Assumptions and objectives of the course: The objective of the course is to broaden the knowledge and skills necessary for the selection of technology methods of basic pollutants removal from industrial water and wastewater.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. Student has structured and theoretically founded knowledge of methods of water treatment and purification of industrial wastewater. - [K2_W03, K2_W04, K2_W07]		
2. Student knows the general principle to create technological systems of industrial wastewater treatment depending on the wastewater characterization. - [K2_W04, K2_W07]		
3. Student has an ordered knowledge of design methods of basic technological processes used in the industrial water treatment technology. - [K2_W03, K2_W04, K2_W07]		
4. Student knows and understand models of water and wastewater management in municipal-industry agglomerations and industrial plants. - [K2_W03, K2_W04, K2_W07]		
Skills:		
1. Student can describe the industrial water treatment technologies and explain the associated physical, chemical and biological processes. - [K2_U09, K2_U10]		
2. Student knows how to design water softening station. - [K2_U01, K2_U12, K2_U18]		
3. Student knows how to do the conception of processes for industrial wastewater treatment plant. - [K2_U01, K2_U12, K2_U18]		
Social competencies:		

1. Student understands the need for teamwork in solving theoretical and practical problems. - [K2_K03]
2. Student understands the different roles in teamwork and the need for information and knowledge exchange in a group work. - [K2_K03, K2_K04]
3. Student understands the need for a systematic deepening and broadening his/her competences. - [K2_K01]

Assessment methods of study outcomes

Lecture

- written final exam
- activity

Laboratories:

- review of the knowledge and skills necessary to carry out the exercises,
- reports,
- activity

Project:

- evaluation of the project report
- oral presentation of the project
- activity

Course description

Lectures

Industrial water

Basic indicators for determining the quality of the water in the heating and boiler (water stability, stability indices, water corrosivity). Processes and equipment used in industrial water treatment. Water softening methods (methods of thermal and chemical), Ion Exchange (range of applications, rules for the operation of equipment for water treatment methods), membrane technology (microfiltration, ultrafiltration, nanofiltration, reverse osmosis, electrodialysis), degassing of water (mechanical, thermal and chemical methods). Water treatment technology for energy purposes. Water quality requirements for energy purposes. Examples of industrial installations: treatment of water for the purposes of district heating, boiler and refrigeration.

Industrial wastewater

Models of water and wastewater management in municipal-industry agglomerations and industrial plants. Criteria and standards of industrial wastewater treatment. General principle to create technological systems of industrial wastewater treatment depending on the wastewater characterization. Processes used in industrial wastewater treatment (physical-chemical processes: neutralization, oxidation, reduction, chemical precipitation and coagulation; flotation; biological processes: anaerobic, aerobic). Characterization of quantity and quality industrial wastewater in different industrial plants (slaughter-house and meal industry, dairy industry, plants treatment of metals) .

Project

Technological design of water softening station to power boilers.

Laboratories

1. Water softening ? chemical precipitation.
2. The coagulation process applied to the clarification and separation of suspended solids in waters for industry, processes and industrial wastewater.
3. Wastewater neutralization.
4. Ion-exchange processes in industry and energy potentials.
5. Potential of sorption processes and chemical oxidation in the removal of synthetic and natural dyes.
6. Technical Tours: visiting industrial facilities for water and wastewater treatment

Result of average student's workload

Activity	Time (working hours)
1. Participation in lectures :	30
2. Participation in laboratories	10
3. Participation in project	15
4. Consultation with the lecturer	5
5. Report preparation (work at home)	15
6. Preparation for exam	30

Student's workload

Source of workload	hours	ECTS
Total workload	105	6
Contact hours	60	4
Practical activities	10	1
