Name of the module/subject Technologies of Wastewater				
Profile of study Profile of study (general academic, practical) (brak) Profile of study (general academic, practical) (brak) Polish Course (compulsory, obligatory) Polish Polish				
Elective path/specialty - Subject offered in: Polish Obligatory Cycle of study: First-cycle studies No. of hours Lecture: 32 Classes: - Laboratory: 14 Project/seminars: 14 6 Status of the course in the study program (Basic, major, other) (brak) Education areas and fields of science and art technical sciences Responsible for subject / lecturer: dr inż. Tymoteusz Jaroszyński email: tymoteusz. jaroszyński@put.poznan.pl tel. 61 6652436 Wydział Budownictwa i Inżynierii Środowiska ul. Piotrowo 5, 60-965 Poznań Prerequisites in terms of knowledge, skills and social competencies: 1 Knowledge Skills Subject offered in: Polish Course (compulsory, obligatory) Course (trul-time, part-time) No. of credits Lecture: (university-wide, from another field) (brak) ECTS distribution (nur and %) 6 100% Responsible for subject / lecturer: Dr inż. Zbysław Dymaczewski email: zbysław.dymaczewski @put.poznan.pl tel. 61 6652436 Wydział Budownictwa i Inżynierii Środowiska ul. Piotrowo 5, 60-965 Poznań Prerequisites in terms of knowledge, skills and social competencies: 1 Knowledge Student should have a basic knowledge about water technology, mathematics, chemist mechanics and general knowledge from environmental engineering Student should be able to perform mathematical calculations, physical, chemical, mechather the fluids and calculation of equipment and facilities of water and wastewater treatment				
- Polish obligatory Cycle of study: First-cycle studies part-time No. of hours Lecture: 32 Classes: - Laboratory: 14 Project/seminars: 14 6 Status of the course in the study program (Basic, major, other) (brak) (brak) Education areas and fields of science and art technical sciences Responsible for subject / lecturer: dr inż. Tymoteusz Jaroszyński email: tymoteusz.jaroszynski@put.poznan.pl tel. 61 6652436 Wydział Budownictwa i Inżynierii Środowiska ul. Piotrowo 5, 60-965 Poznań Prerequisites in terms of knowledge, skills and social competencies: 1 Knowledge Skills Student should be able to perform mathematical calculations, physical, chemical, mecht the fluids and calculation of equipment and facilities of water and wastewater treatment				
No. of hours Lecture: 32 Classes: - Laboratory: 14 Project/seminars: 14 6				
No. of hours Lecture: 32 Classes: - Laboratory: 14 Project/seminars: 14 6 Status of the course in the study program (Basic, major, other) (brak) Education areas and fields of science and art technical sciences Responsible for subject / lecturer: dr inż.Tymoteusz Jaroszyński email: tymoteusz.jaroszynski@put.poznan.pl tel. 61 6652436 Wydział Budownictwa i Inżynierii Środowiska ul. Piotrowo 5, 60-965 Poznań Prerequisites in terms of knowledge, skills and social competencies: 1 Knowledge Student should be able to perform mathematical calculations, physical, chemical, mechatics and calculation of equipment and facilities of water and wastewater treatment

email: tymoteusz.jaroszynski@put.poznan.pl tel. 61 6652436 tel. 61 6653662 Wydział Budownictwa i Inżynierii Środowiska ul. Piotrowo 5, 60-965 Poznań ul. Piotrowo 5, 60-965 Poznań Prerequisites in terms of knowledge, skills and social competencies: 1 Knowledge Student should have a basic knowledge about water technology, mathematics, chemistra mechanics and general knowledge from environmental engineering Student should be able to perform mathematical calculations, physical, chemical, mechanics and calculation of equipment and facilities of water and wastewater treatment				
tel. 61 6652436 Wydział Budownictwa i Inżynierii Środowiska ul. Piotrowo 5, 60-965 Poznań Prerequisites in terms of knowledge, skills and social competencies: 1 Knowledge Skills Skills Student should have a basic knowledge about water technology, mathematics, chemisti mechanics and general knowledge from environmental engineering Student should be able to perform mathematical calculations, physical, chemical, mechanics and calculation of equipment and facilities of water and wastewater treatment				
Wydział Budownictwa i Inżynierii Środowiska ul. Piotrowo 5, 60-965 Poznań Prerequisites in terms of knowledge, skills and social competencies: 1 Knowledge Skills Skills Skills Skills Student should have a basic knowledge about water technology, mathematics, chemistra mechanics and general knowledge from environmental engineering Student should be able to perform mathematical calculations, physical, chemical, mechanics and calculation of equipment and facilities of water and wastewater treatment				
Prerequisites in terms of knowledge, skills and social competencies: 1 Knowledge Student should have a basic knowledge about water technology, mathematics, chemistre mechanics and general knowledge from environmental engineering Student should be able to perform mathematical calculations, physical, chemical, mechanics and calculation of equipment and facilities of water and wastewater treatment				
1 Knowledge Student should have a basic knowledge about water technology, mathematics, chemistremechanics and general knowledge from environmental engineering Skills Student should be able to perform mathematical calculations, physical, chemical, mechanics and calculation of equipment and facilities of water and wastewater treatment				
1 Knowledge mechanics and general knowledge from environmental engineering 2 Skills Student should be able to perform mathematical calculations, physical, chemical, mechanics and calculation of equipment and facilities of water and wastewater treatment				
2 Skills the fluids and calculation of equipment and facilities of water and wastewater treatment				
3 Social Awareness to constantly update and supplement knowledge and skills.				
Assumptions and objectives of the course:				
- The objective of the course is to broaden the knowledge and skills scopes of wastewater technology necessary for the selection of technology methods of basic pollutants removal from municipal wastewater.				
Study outcomes and reference to the educational results for a field of study				
Knowledge:				
1. Student knows the technological systems of wastewater treatment depending on the wastewater characterization on influent and effluent [[K2_W03, K2_W04, K2_W07]]				
2. Student knows the design methods of basic technological processes and technological systems of wastewater treatment and sludge handling and disposal systems for waste and sludge produced at WWTP [[K2_W03, K2_W04, K2_W07]]				
3. Student understands basics of experiment in pre-design research of WWTP [[K2_W03, K2_W04, K2_W07]]				
Skills: 1. Student can prepear the design concept of technology for municipal wastewater treatment plant [[K2_U01, K2_U12,]]				
2. Student can work in a team (measurements and elaboration of the obtained experimental data) [[K2_U01, K2_U12,]]				
Social competencies:				
1. Student understands the need for teamwork in solving theoretical and practical problems [[K2_K03]]				

Assessment methods of study outcomes

Faculty of Civil and Environmental Engineering

- -Lecture
- 1. Attendance and lecture activity checkup
- 2. Written finale exam

Laboratory exercises

- 1. Short entrance written test before each laboratory
- 2. Written report of each laboratory exercise
- 3. Written final test regarding all exercises
- 4. Activity evaluation during each laboratory

Project

- 1. Verification of project advancements and independent design work after each of 3 project parts (Part 1 ? primary treatment process, Part 2 ? biological treatment, Part 3 ? sludge handling)
- 2. Written exam after each of 3 project part

Course description

-Lecture

Ecology in water and wastewater management. Type and characteristics of wastewater. Flow rates (quantity characteristic). Composition of wastewater? wastewater characteristics (quality characteristic). Loading of contaminants. Unit loads. Population equivalent (p.e.). Regulation for effluent wastewater to sewer systems and recipients. Efficiency of treatment process at wastewater treatment plants (WWTP). Types of WWTPs? process flowsheets, processes used, pollutants removed, devices and facilities used, effectiveness. Mechanical WWTP (screening, grit chambers, grease tank, primary settling tanks). Chemical WWTP. Biological WWTP (trickling filters, activated sludge). Integrated biological processes for BOD removal (organic components) and Nutrient Removal (nitrogen and phosphorus). Types of solid and sludge wastes at WWTP. Sludge characteristic. Processes and devices used for treatment and disposal of sludge wastes: thickening, stabilization (anaerobic digestion, aerobic digestion, alkaline stabilization), dewatering. Sludge waste disposal - utilization and landfilling.

Laboratory subjects:

- 1. Hydraulic efficiency of settling tanks.
- 2. Effectiveness of aeration facilities
- Activated sludge process.

Project subjects:

- 1. Balance of rates (quantity characteristic) and composition of wastewater (quality characteristic). Loading of contaminants. Population equivalent (p.e.). Technological calculations of mechanical WWTP (screening, grit chambers, primary settling tanks)
- 2. Technological calculations of biological WWTP with nutrient removal (activated sludge, final settling tanks)
- 3. Technological calculations of devices used for treatment of sludge wastes (gravity and mechanical thickening, anaerobic conventional German digesters with reinforced concrete construction, devices for dewatering).

Basic bibliography:

- 1. Praca zbiorowa pod redakcją Z. Dymaczewskiego: Poradnik eksploatatora oczyszczalni ścieków. Wyd. III, PZITS, Oddz. Wielkopolski, Poznań 2011
- 2. Heidrich Z., Witkowski A.: Urządzenia do oczyszczania ścieków Projektowanie, przykłady obliczeń. Wyd. II, Seidel-Przywecki Sp. z o.o., Warszawa 2010
- 3. Project instruction materials (In polish)
- 4. Laboratory instruction materials (In polish)

Additional bibliography:

1. Wastewater Engineering. Treatment and Reuse. Metcalf & Eddy. Inc. Mc Graw Hill, Fourth Edition, 2003

Result of average student's workload	
Activity	Time (working hours)

Poznan University of Technology Faculty of Civil and Environmental Engineering

1. Lecture participation	30
2. Laboratory participation	30
3. Preparation for laboratory exercises	10
4. Preparation of the laboratory report at home	10
5. Project participation	30
6. Project preparation at home	25
7. Project and laboratory consultation with the instructor (Student is assumed to attend 5	5
consultations): 5 hours	10
8. Preparation for laboratory final examination	30
9. Preparation for lecture final examination and final exam attendance	

Student's workload

Source of workload	hours	ECTS
Total workload	180	6
Contact hours	90	4
Practical activities	90	2
