

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Municipal Systems		Code 1010102221010132026
Field of study Environmental Engineering Second-cycle	Profile of study (general academic, practical) (brak)	Year /Semester 1 / 2
Elective path/specialty Water Supply, Water and Soil Protection	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: Second-cycle studies	Form of study (full-time, part-time) full-time	
No. of hours Lecture: 1 Classes: - Laboratory: - Project/seminars: 2		No. of credits 4
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences Technical sciences		ECTS distribution (number and %) 4 100% 4 100%
Responsible for subject / lecturer: Przemysław Muszyński email: przemyslaw.muszynski@put.poznan.pl tel. (61) 6653662 Wydział Budownictwa i Inżynierii Środowiska ul. Piotrowo 5, 60-965 Poznań		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Basic knowledge of drinking water treatment, construction and operation of simple pumping systems, construction and operation of sanitation, basic knowledge of fluid mechanics.
2	Skills	Design of water treatment plants, pump selection and the necessary fittings in pump systems, solving pumping systems, design of sanitary hot and cold water, the use of fundamental rights, depending on the mechanics of liquids and gases.
3	Social competencies	Awareness of the need to constantly update and supplement knowledge and skills.
Assumptions and objectives of the course: The acquisition by the students basic knowledge, skills in designing indoor swim public and private.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. Classification of swimming pools. - [K2_W05, K2_W07]		
2. Technological solutions of swimming pools. - [K2_W05, K2_W07]		
3. Functional systems indoor swimming pool. - [K2_W07]		
4. Swimming pool water treatment. - [K2_W05, K2_W07]		
5. Methods for disinfection of swimming pool water. - [K2_W05, K2_W07]		
6. The quality requirements for pool water. - [K2_W03]		
7. Technological water systems in swimming pools. - [K2_W05, K2_W07]		
8. Solutions swimming pools installations. - [K2_W05, K2_W07]		
9. Adjust the water level in the pools without and with expansion tank. - [K2_W07]		
10. Sewage disposal technology. - [K2_W07]		
11. Cleaning and hygiene requirements in indoor swimming pools. - [K2_W07]		
Skills:		

1. Selecting the right inside the pool for the application requirements. - [K2_U19]
2. Accepting the right solution of the swimming-pool. - [K2_U19]
3. Meeting the requirements of the installation and construction, as provided for individual rooms in a bathing establishment. - [K2_U19]
4. Designing a water treatment plant in the plant pool. - [K2_U19]
5. Designing a technological installation, supply and drain pool water into the basin and along the respective devices. - [K2_U19]
6. Determination of the heat demand for heating swimming pool water (heat balance). - [K2_U19]
7. Presentation of the user conduct for staff in the field of swimming pool cleaning and hygiene activities. - [K2_U04]

Social competencies:

1. The student understands the need for teamwork in solving theoretical and practical problems. - [K2_K03]
2. The student sees the need for systematic deepening and extending their competence. - [K2_K01]
3. The student is aware of the social role of technical university graduate. - [K2_K07]

Assessment methods of study outcomes

Lectures:

- a written final exam test students' knowledge.

Tutorials:

- evaluating the correctness of independent solutions of tasks,
- continuous evaluation for each class,
- final test in the last week of the semester.

Projects:

- assessment of the correctness of the design,
- the ocean of knowledge of the scope of the project,
- ontinuous evaluation for each class (rewarding activity).

Course description

<p>Division of swimming pools (private, public and open, covered, with a variable cover). Characteristics of indoor swimming pools (sports, swimming, for swimming, for non-swimmers, children, jumping, playing water polo, multi-tasking). Technology workmanship and material troughs pools. The quality of the water in the pool. Systems for swimming pools (open, closed).</p> <p>The functional indoor swimming pool: hygiene zone in the indoor swimming pool (dirty and clean), the basic functional groups of rooms in the plant pool (part of the overall team szatniowo spray, indoor swimming pool, heating room requirements for premises in swimming-pool</p> <p>Pre-treatment of swimming pool water (requirements for catcher fibers and hairs). Coagulation: definitions (coagulation, dispersion, colloid); types of coagulants; chemical reactions; recommended doses of coagulants; coagulant dosage conditions. Filtration: The filtration process conditions; division of filters (non-pressure, pressure, vacuum); division filters depending on the type of filling (bed single layer, multilayer, diatomitowi enriched with activated carbon, high performance of plastic); requirements for flushing pressure filters; filtration characteristics deposits diatomaceous earth, diatomite filter stages of work.</p> <p>Adjustment of the pH of pool water: causes and effects of changes in the pH of pool water; correctors pH (pH minus measures and measures pH plus); with dosing recommendations equalizer pH; chemical reactions associated with the pH adjusted with sodium carbonate Disinfection of pool water.</p> <p>Ozone treatment of swimming pool water. Disinfection of pool water by UV rays.</p> <p>Technological water systems in pools: the flow of water in the basin (requirements for the proper flow of water through the basin); water exchange systems in the basin (horizontal, vertical, horizontal-vertical); means for supplying water to the basin; means for discharging water from the basin; transfers (point, line); other drains water from the basin; steady inflow and outflow of water from the basin (symmetrical splitter, splitter simple, linear transfer from gutters); tank overflow (overflow tank tasks, open the overflow tank volume); Fresh make-up water (water losses in circulation pool, adding fresh makeup water, filling times of the swimming pool).</p> <p>Adjust the water level in the expansion tank basins: structure and tasks of the regulator. Adjust the water level in the pools without expansion tank: mechanical and electronic water level controller. Solutions swimming pool installation: the installation of swimming pool skimmers (recommendations or requirements), installation of swimming pool gutter (recommendations or requirements). Discharge process wastewater basin: the type of waste water and place the drain. Cleaning and hygiene requirements in indoor swimming pools.</p>

<p>Result of average student's workload</p>	
<p>Activity</p>	<p>Time (working hours)</p>

1. Participation in lectures	15	
2. Participation in the project activities	15	
3. Participation in tutorials	15	
4. Participation in consultations related to the implementation of the project and tutorials	5	
5. Implementation of project activities	15	
6. Preparation for the final test of tutorials	15	
7. Preparation for the exam and the presence of the exam	15	
Student's workload		
Source of workload	hours	ECTS
Total workload	95	4
Contact hours	50	2
Practical activities	30	2
