

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Transfer and distribution of electric energy		Code 1010325331010323675
Field of study Power Engineering	Profile of study (general academic, practical) (brak)	Year /Semester 2 / 3
Elective path/specialty Ecological Source of Electrical Energy	Subject offered in: polish	Course (compulsory, elective) obligatory
Cycle of study: Second-cycle studies	Form of study (full-time, part-time) part-time	
No. of hours Lecture: 5 Classes: - Laboratory: 10 Project/seminars: -		No. of credits 2
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences Technical sciences		ECTS distribution (number and %) 2 100% 2 100%
Responsible for subject / lecturer: Dr inż. Ireneusz Grządzielski email: ireneusz.grzadzieski@put.poznan.pl tel. 61 665 2635 (2392) Wydział Elektryczny ul.Piotrowo 3A, 60-965 Poznań		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Possesses basic knowledge of the theory of electrical circuits, electromagnetic field, electrical machines, High voltage techniques, electric power engineering and electrical power generation
2	Skills	Has effective self-study ability in the domain of the chosen field of studies, is able to integrate the knowledge acquired at the credited courses
3	Social competencies	Is aware of the need to develop his knowledge and competencies, is ready to undertake the cooperation and team work
Assumptions and objectives of the course: Getting knowledge of the phenomena related to the electric power transmission and distribution, voltage regulation and reactive power compensation, power flow control in the electric power grid, practice in operation and use of the DAKAR program in the scope of the analysis of the power system steady operation conditions.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. Has detailed knowledge of the rules of construction, modeling, designing, operation and maintenance of the electric power system elements, - [K_W04 ++] 2. Has ordered knowledge of the electric, electronic and power electronic circuits theory as well as of the signal theory and signal processing techniques - [K_W17++]		
Skills:		
1. Can use acquired mathematical methods and models as well as the computer simulation to discuss and assess the operation of the electric power elements and systems - [K_U07 ++] 2. Can use properly chosen techniques and devices for measuring basic magnitudes describing power elements and systems - [K_U10++]		
Social competencies:		
1. Understands the need and knows opportunities of the continuous studies (second and third cycle studies, post-diploma, courses) - improving professional skills, personal and social - [K_K01 ++]		
Assessment methods of study outcomes		

<p>Lectures:</p> <ol style="list-style-type: none"> 1. Assesment of the knowledge and skills shown at the written and oral examinations , 2. Continuous assessment during courses (bonus for activity and perception quality). <p>Laboratory:</p> <ol style="list-style-type: none"> 1. Test of the knowledge necessary to deal with problems posed in the lab tasks. 2. Assessment of the knowledge and skills related to the lab task completion. Assessment of the task report. 		
Course description		
<p>Lectures: Power flow control in the transmission and distribution networks, wind power stations? operation in the electric power system, stability enhancement means.</p> <p>Laboratory involves experiments carried out using the DAKAR program, in the scope of the transient states in the transmission and distribution networks of the electric power system described during lectures</p>		
<p>Basic bibliography:</p> <ol style="list-style-type: none"> 1. Sz. Kujaszczyk (pod red.): Elektroenergetyczne układy przesyłowe, WNT, Warszawa 1997. 2. J. Machowski: Regulacja i stabilność systemu elektroenergetycznego. OWPW, Warszawa 2007. 3. Poradnik Inżyniera Elektryka . t.3. WNT, Warszawa 2005 		
<p>Additional bibliography:</p> <ol style="list-style-type: none"> 1. Z. Kremens, M. Sobierajski: Analiza systemów elektroenergetycznych. WNT, Warszawa, 1996. 2. J.Machowski , J. Białek , J. Bumby: Power System Dynamics: Stability and Control. IEEE Wiley, 2008. 		
Result of average student's workload		
Activity	Time (working hours)	
1. participation in lecture courses	5	
2. participation in labs	10	
3. participation in discussions related to lectures	5	
4. participation in discussions related to labs	5	
5. preparation to labs	10	
6. lab reports? elaboration	10	
7. preparation to examination	10	
8. taking an examination	3	
Student's workload		
Source of workload	hours	ECTS
Total workload	58	2
Contact hours	28	1
Practical activities	30	1
