Prere	quisites in term	s of knowledge, skills an	d social competencies	:			
1	Knowledge         1. Student has the ground knowledge of mathematics, especially algebra, logic, mathematica analysis, statistics and elements of discrete and applied mathematics.						
		<ol><li>Student has grounded and the abstract data types and their imp</li></ol>					
2	Skills	sources; can also integrate the a and justify them.	If acquire knowledge from the literature, databases and other acquired knowledge, interpret it, reason, formulate conclusions				
		2. Student can use programming programs written in imperative, of		to design, run and debug simple e programming languages.			
3	Social competencies		udent knows that she/he is obliged to perform well her/his job and also knows that she/he is liged to perform well the part of assigned to her/him part of teamwork.				
Assu	mptions and obj	ectives of the course:					
Presentation of elements of the theory of formal languages and elements of the theory of translation. Introducing syntax- directed translation methods and tools in order to develop the ability to create the simple formal language processing scripts/systems.							
	•	mes and reference to the	educational results fo	r a field of study			
	/ledge:						
algorith		d theoretically grounded knowledg tyles of programming, methods of					
techniq	ues, abstract data typ	d theoretically grounded knowledges and their implementation, and					
		lgorithms using basic algorithmic	techniques and also can analy	ze their computational			
2. Stud	ent is able to assess t	he usefulness of routine methods priate technologies [K_U22]	and tools to solve simple com	nputer engineering tasks, and is			
Socia	I competencies:						
		portance of the accurate completi actness and submitting the work o		ht notational standards,			

## Assessment methods of study outcomes

Lecture and classes: writing test (checking the knowledge on the theory of formal languages and the theory of translation), minimal score 50,1%

Laboratory: 3 writing tests which check the skills in programming text transducers written in AWK; minimal score 50,1%.

## **Course description**

# Lecture:

The notion of a formal language. Alphabet, syntax and semantics of a formal language. The generative (combinatorial grammars-like) and the acceptor (abstract machine-driven) approaches to defining language syntax. Noam Chomsky?s classification of formal languages. Regular languages: finite automata, regular expressions. Using AWK and Lex systems to process regular languages. Context-free languages: pushdown automata, context-free grammars. Context and computational languages and their acceptor automata. The notion of a translation. Preliminaries concerning formal methods of defining the semantics of programming languages (operational, denotational and axiomatic). Translation: interpreting vs compiling. Phases and runs of a compiler. Using the syntax-directed translation to define the analytic phases of a compiler: lexical, syntactic and context-dependent. Basics of intermediate and final code generation, concept of an intermediate language. Basics of a runtime system: storage allocation, accessing the non-local variables and parameter passing.

### Classes:

Solving problems connected with formalizing exemplary languages and specifying their acceptors (transducers) formulated as syntax-directed definitions.

- 1. Regular expressions
- 2. Finite state automata
- 3. Contex-free grammars
- 4. Pushdown automata, writing test

#### Laboratory:

Implementing text transducers by using AWK system in the Linux environment.

- 1. Basics concerning running environment + AWK
- 2. AWK
- 3. AWK
- 4. AWK, AWK test
