

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject (-)		Code 1010334451010332570
Field of study Information Engineering	Profile of study (general academic, practical) (brak)	Year /Semester 3 / 5
Elective path/specialty -	Subject offered in: polish	Course (compulsory, elective) elective
Cycle of study: First-cycle studies	Form of study (full-time,part-time) part-time	
No. of hours Lecture: 16 Classes: - Laboratory: 12 Project/seminars: -		No. of credits 4
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences		ECTS distribution (number and %) 4 100%
Responsible for subject / lecturer: dr inż. Tomasz Bilski email: tomasz.bilski@put.poznan.pl tel. 061 66 53 554 Faculty of Electrical Engineering ul. Piotrowo 3A 60-965 Poznań		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Student has basic knowledge of physics, especially in such fields as mechanics, thermodynamics, optics, electricity, magnetism, nuclear physics, solid-state physics, including knowledge essential to understand physical phenomena in electronic circuits. Student has organized knowledge with theoretical foundations of basic program constructions, algorithm implementations, paradigms and programming styles, software verification methods, formal languages, compilers, platforms.
2	Skills	K_U01: Student is able to acquire information from literature, data bases and other sources; student is able to integrate acquired information, to interpret it, to draw conclusions and to formulate and justify judgments. K_U03: Student is able to create engineer work documentation and to prepare text with the work result discussion.
3	Social competencies	K_K02: Student understands and is aware of the importance of nontechnical issues related to computer engineer activity. Student understands the responsibility associated to his engineering decisions. K_K07: Student understands the importance of stringent accomplishment of a given project with proper notation standards, proper language. Student understands the importance of keeping deadlines.
Assumptions and objectives of the course: The main objective is to provide knowledge and skills related to communication protocols. Protocols used for many different network services are presented.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. Student has organized knowledge with theoretical foundations of computer networks. - [K_W07] 2. Student has organized knowledge with theoretical foundations of Internet technologies. - [K_W11] 3. Student has organized knowledge with theoretical foundations of teleinformatics, protocols and services in telecommunication networks. - [K_W15]		
Skills:		
1. Student is able to work alone and in a group; student can assess time needed to finish a given work; student can develop and realize schedule necessary to keep up deadlines. - [K_U02] 2. Student is able to create engineer work documentation and to prepare text with the work result discussion. - [K_U03] 3. Student is able to do critical analysis of computer hardware operations, operating system and computer networks. - [K_U11]		

Social competencies:
1. Student understands the responsibility associated to his own work. Student is able to subordinate to team work rules and to take responsibility for cooperative tasks. - [K_K04]
2. Student understands the importance of stringent accomplishment of a given project with proper notation standards, proper language. Student understands the importance of keeping deadlines. - [K_K07]

Assessment methods of study outcomes
Lecture: written exam. Laboratory: tests, exercises assessment, reports assessment. More than 50% of all points is necessary for positive result.

Course description
General characteristics of application layer protocols. Protocols used for network management processes: DHCP, SNMP. Domain Name System (domain name space, name servers, resolver-server communication modes, resource records. Time synchronization in computer networks (time sources, timestamps, time servers, NTP). Electronic mail (structure of mail system, protocols: SMTP, POP, IMAP, X.400, MIME). WWW (structure of system, proxy servers, HTTP cookies, CDN, web optimization tools). IP telephony (signalling protocols, H.323, SIP, real time transmission protocols, RTP, RTCP).

Basic bibliography:
1. Albitz P., Liu C., DNS and BIND. O'Reilly
2. Tanenbaum A., Computer Networks.

Additional bibliography:
1. Davidson J., Peters J., Voice over IP.
2. Parker T., Sportack M., TCP/IP
3. Wallingford T., Switching to VoIP, O'Reilly
4. Wessels D., Web caching. O'Reilly

Result of average student's workload	
Activity	Time (working hours)
1. Lectures	16
2. Laboratory	12
3. Exam preparation	30
4. Exam	2
5. Theoretical preparation for laboratory	10
6. Practical preparation for laboratory	13
7. Reports	8
8. Consultations	20

Student's workload		
Source of workload	hours	ECTS
Total workload	111	4
Contact hours	50	2
Practical activities	25	1
