

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Software engineering		Code 1010334461010330109
Field of study Information Engineering	Profile of study (general academic, practical) (brak)	Year /Semester 3 / 6
Elective path/specialty -	Subject offered in: polish	Course (compulsory, elective) obligatory
Cycle of study: First-cycle studies	Form of study (full-time, part-time) part-time	
No. of hours Lecture: 16 Classes: - Laboratory: - Project/seminars: 8		No. of credits 4
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences		ECTS distribution (number and %) 4 100%
Responsible for subject / lecturer: dr hab. inż. Barbara Begier email: Barbara.Begier@put.poznan.pl tel. (61) 665-3724 Wydział Elektryczny ul. Piotrowo 3A 60-965 Poznań		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Student has theoretical and partially practical knowledge concerning: programming constructions, implementation of algorithms, programming styles, verification of software correctness, formal languages, compilers, and platforms. Knowledge learnt during the first semester of software engineering course.
2	Skills	Student is able to find information from professional literature, databases and other sources; he/she can also integrate and correctly interpret the gained information and then to conclude and formulate his/her own opinions. Student can create object models (use cases, objects, and classes) using the UML standard.
3	Social competencies	Student is aware of an importance of non-technical aspects and then consequences of software engineer's activities; he/she understands his/her responsibility for his/her decisions. Student understands a need to learn constantly, including improvement of using foreign languages and other professional and social competencies.
Assumptions and objectives of the course: Quality aspects in software production and quality of a software product. Agile methods applied in software development.		
Study outcomes and reference to the educational results for a field of study		
Knowledge: 1. Student has basic knowledge concerning methodologies applied in software engineering: software quality characteristics, overview of agile methodologies: XP, TDD, AMDD, FDD, BDD, and Scrum. - [K_W12] 2. Student is knowledgeable with the state of art and modern trends in software engineering and computing. - [K_W19]		
Skills: 1. Student is able to formulate requirements, to build an object model, and assess a simple information system, its functions, and components. - [K_U16] 2. Student is able to document an implementation of a software product, including its quality tree and test plan, and also to discuss results of his/her engineering task. - [K_U03]		
Social competencies: 1. Student is aware of an importance of a precise implementation of a software product, using the design standards, and writing correct documentation. - [K_K07] 2. Student is aware of his/her responsibility for the work done. He/she points out his/her readiness to work in team and to be responsible for results of tasks realized in team. - [K_K04]		

Assessment methods of study outcomes		
<p>The content of lectures presented in the first and second semester of the software engineering course is a subject of an exam. During the project classes student shows his/her skills in object modeling, including software object behaviour and interactions. Marks are given for each UML diagram separately, and also for the test plan and document of quality tree.</p>		
Course description		
<p>Specification of software quality and its criteria according to the standards of ISO 9126 and ISO 25010. Software quality policies in software production. Test planning.</p> <p>Values and objectives in agile (soft) methodologies. Roles of various stakeholders in the software process. Principles expressed in the Agile Manifesto. Review of agile methodologies: XP (eXtreme Programming), TDD (Test Driven Development), AMDD (Agile Model Driven Development), FDD (Feature Driven Development), BDD (Behavior Driven Development), and Scrum. Human aspects in software development. Software user satisfaction with a software product, EUCS (End User Computing Satisfaction) model.</p> <p>Project. Development of an object model using the UML standard (modeling of software object behaviours). Development of the test plan.</p>		
Basic bibliography:

Result of average student's workload		
Activity	Time (working hours)	
1. Participation in lectures	16	
2. Participation in project labs	8	
3. Project modeling and design	26	
4. Exam, consultations	10	
5. Preparation for the exam	20	
Student's workload		
Source of workload	hours	ECTS
Total workload	80	4
Contact hours	34	1
Practical activities	34	1
