

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Functional Analysis		Code 1010342521010347253
Field of study Mathematics	Profile of study (general academic, practical) (brak)	Year /Semester 1 / 2
Elective path/specialty -	Subject offered in: polish	Course (compulsory, elective) obligatory
Cycle of study: Second-cycle studies	Form of study (full-time, part-time) full-time	
No. of hours Lecture: 2 Classes: 2 Laboratory: - Project/seminars: -		No. of credits 6
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art the sciences Mathematical sciences		ECTS distribution (number and %) 6 100% 6 100%
Responsible for subject / lecturer: Prof. dr hab. Ryszard Płuciennik email: ryszard.pluciennik@put.poznan.pl tel. 61 665 33 59 Wydział Elektryczny ul. Piotrowo 3A 60-965 Poznań		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Basic knowledge in domain of calculus and topology on the level of studies of the first degree.
2	Skills	Using of basic notions of topology, in particular topological spaces, metric spaces, convergence of sequences in these spaces and continuity of functions. Mastery in application of the most important topological notions in context of metric spaces.
3	Social competencies	Understanding of limitation of own knowledge and motivation for further education.
Assumptions and objectives of the course: Deep knowledge in functional analysis. Skills for application of acquired knowledge to theoretical as well as practical problems in other subjects mathematics and physics.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. understand well the role and weight of construction of examples and counterexamples in functional analysis. - [K_W02] 2. master functional analysis with definitions, theorems and proofs. - [K_W05] 3. understand in subject of functional analysis open problems and problems at the stage of study. - [K_W06] 4. understand connections of functional analysis with other subjects of classical analysis. - [K_W07]		
Skills:		
1. verify hypothesis in functional analysis by construction of proper examples and counterexamples. - [K_U01] 2. present content connected with functional analysis and verify correctness of deduction in mathematical proofs. - [K_U02, K_U03, K_U04] 3. distinguish the topological structure in objects occurring in functional analysis and draw a conclusions from it. - [K_U08]		
Social competencies:		
1. He is able to formulate a problem precisely and try to solve it. - [K_K02] 2. He understand the need for adducing intuition to his own understanding as well as to popularization of abstract mathematics. - [K_K05] 3. He is able search out some information In literature (also English), by oneself. - [K_K06]		

Assessment methods of study outcomes		
<p>Lecture Valuation of knowledge and skills during oral and written exam.</p> <p>Practical Lessons Two large tests concerning an application of knowledge from the lectures in exercises (student can use his own notes) Systematic control of theoretical knowledge in form of short quizzes. Valuation of student answers during lessons. Valuation of activity during lessons.</p>		
Course description		
<p>Normed and Banach spaces. Examples of such spaces. Hölder Inequality and Minkowski Inequality. Linear operators and linear functionals. Norm of a linear operator and its properties. Open Map Theorem and Closed Graph Theorem. Riesz Theorem on compactness of a ball. Sequences of linear and continuous operators ? Banach-Steinhaus Theorem. An application of Banach-Steinhaus Theorem to classical analysis. Hahn-Banach Theorem and its application. Representation theorems for linear and continuous functional in concrete function or sequence spaces. Weak convergence and weak topologies in normed spaces. Elements of geometry of Banach spaces. Krein-Milman Theorem. Mazur Theorem. Hilbert spaces. Elements of spectral theory.</p>
