|  |  | rizable econometric models with O  |   |                                  |  |  |
| 6. Exp   | ains results of optimiz                            | ation and econometric models and   | uses them in management.  | - [K2A_U02]                      |  |  |

2

### Social competencies:

- 1. Student is aware of optimization benefits in management and planning. [K2A\_K03]
- 2. Spreads optimization in management problem solving. [K2A\_K05]
- 3. Can objectively assess and analyze data and solutions of management problems. [S2A\_K06]

## Assessment methods of study outcomes

Exercises pass with mark from written test in theory and tasks.

### Course description

1. Estimation of linear and linearizable econometric models with OLS.

2. Clasification and modeling of decision tasks. Problems of production structure, mixture, resource division, transportation and tasks allocation.

3. Linear programming. Simplex and graphical method.

4. Multi-criteria continous programming. Metacriterion, objectives hierarchy.

5. Multi-criteria integer programming. Fulfillment degre, AHP.

6. Net programming. CPM ? critical path method. PERT-program evaluation and review technique.

7. Transportat optimization problem and Little algorithm.

8. Basics of nonlinear programming.
