

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Machine Technology and Design of Production Processes		Code 1011101351011120159
Field of study Management - Full-time studies - First-cycle	Profile of study (general academic, practical) (brak)	Year /Semester 3 / 5
Elective path/specialty -	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: First-cycle studies	Form of study (full-time, part-time) full-time	
No. of hours Lecture: 30 Classes: - Laboratory: 15 Project/seminars: 15		No. of credits 4
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art study effects leading to the acquisition of engineering qualifications		ECTS distribution (number and %) 4 100%
Responsible for subject / lecturer: dr hab. inż. Stanisław Janik prof. nadzwyczajny email: stanislaw.janik@put.poznan.pl tel. 061 665 33 84 Wydział Inżynierii Zarządzania Strzelecka 11, 60-965 Poznań		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Basic knowledge from high school. The necessary information in the field of technology and machine parts will be explained subsequently.
2	Skills	Ability to solve simple problems, the ability to obtain information from the identified sources
3	Social competencies	Understanding the importance of technical sciences and their applications
Assumptions and objectives of the course: The aim of the course is to familiarize students with the theoretical and practical issues related to the design of technological processes and assembly processing with particular emphasis on the conditions within the market economy. Preparation of documentation regarding technological process.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. Has basic knowledge of products? lifecycle - [K01-InzA_W01] 2. Knows fundamental methods, techniques, tools and materials that are applied in solving simple engineering tasks relating building and machines? exploitation - [K04-InzA_W02] 3. Knows some typical industrial technologies and has an extensive knowledge of building technologies and machines? exploitation - [K07-InzA_W05]		
Skills:		
1. Is able to identify the project tasks and solve simple design tasks in the field of construction and exploitation of machinery - [K01-InzA_U2] 2. Is able to perform a technical and economic analysis of the undertaken engineering activities - [K01-InzA_U04] 3. Is able to design and analyze technological processes and organize production systems - [K01-InzA_U5] 4. Can design a structure or technology of simple machinery parts and components as well as design the organization of the production units of the first complexity degree - [K01-InzA_U06, K01-InzA_U07]		
Social competencies:		
1. Recognizes the importance of design and organization of technological processes in business engineering - [K01-InzA_K1] 2. Is aware of the significance of good design processes in finished products - [K01-InzA_K2]		

Assessment methods of study outcomes		
<p>Formative assessment: Laboratories: on the basis of the current progress Lectures: on the basis of the answers to the questions regarding the covered material during previous lectures</p> <p>Collective assessment: Lecture: written exam on the basis of previously prepared set of questions Written assignment based in laboratories</p>		
Course description		
<p>The course covers the following topics: Documentation of technological process. Technical standards of working time. Quality. The accuracy of the machining process. The structure of the typical process engineering. Editing. Design of the assembly process. Elements of automation and robotic manufacturing processes. Analysis of the cost. Quality control. Certification. Surveying and layout fits. Tolerances.</p> <p>Project activities include the design of a technological process of a selected part, the documentation of the process and a variant analysis of the cost regarding process implementation. Laboratories conducted in the factory. Unconventional methods of education. Selected technological production processes.</p>
