? Position of ergonomic designing in the methodology of technical designing in machine construction (requirements in the process of technical designing);						
? Anthropotechnical and sociotechnical systems, somatic and receptor interrelationships in the system;						
? Analysis of anthropometric, biomechanical and psychic features and assisting design work in ergonomy: traditional approach and utilisation of CAD systems, motion capture devices or 3D scanning;						
? Analysis of anthropometric and biomechanical features in virtual feature	Analysis of anthropometric and biomechanical features in virtual features;					
? Detailed principles of product ergonomic designing in machine constru	Detailed principles of product ergonomic designing in machine construction;					
? Contemporary fields of ergonomic activity, e.g.: ergonomy for senior citizens and persons with disabilities; ergonomy of extreme works; ergonomy of leisure time and sport (design criteria, requirements, standardisation);						
Instances of knowledge integration in ergonomic designing: e.g.: typography and its significance for designing of signalling and controlling equipment; building engineering and the applied canons of human body; designing of forms of technical objects employing empirical investigations of somatic and receptor traits of the human body:						
? Development trends in designing for needs of ergonomy.
