dr ir ema tel. Fac	nonsible for subjections: Arkadiusz Barczak (h. 1874) 1848–1851; arkadiusz.barczak (h. 1874) 1848–1861; arkadiusz.barczak (h. 1874) 1848–1861; arkadiusz.barczak (h. 1874) 1848–1861; arkadiusz.barczak (h. 1874) 1848–1851; arkadiusz.barczak (h. 1874) 1849–1851; arkadiusz.barczak (h	⊕put.poznan.pl nes and Transportation				
Prere	equisites in term	s of knowledge, skills an	<u> </u>	mathematical logic. Newton-		
1	Knowledge	Student should have basic knowledge in mathematical analysis, mathematical logic, Newton- Euler equation and in the domains of electronics and electrotechnics.				
2	Skills	Student can apply his knowledge in the identification and resolving issues in the domain of automatic control and robotics.				
3	Social competencies					
	nt must understand the	ectives of the course: e utility and functions of control sys	stems in the on-board vehicle sy	stems and in the industrial		
	Study outco	mes and reference to the	educational results for	a field of study		
	vledge:					
1. Has robots.		rning the analysis and design of fu	unctional models used in the co	ntrol systems and industrial		
2. Con	nprehends analysis me	ethods used in the structure desig	n and tuning of controllers [-]			
	=	nain of logical systems modeling.				
4. Has robots.		regarding control devices, their ch	laracteristics and functionality in	both venicle and industrial		
Skills	s:					
2. Can		inology intrinsic in the domain of cand implementation of the control ion technologies [-]				
	al competencies:					
1 Und	erstand social and eco	onomic aspects of automatics and	robotics, especially from the pe	erspective of the sustainable		
		Accessment with	do of other sectors.			
		Assessment method	ds of study outcomes			

Faculty of Working Machines and Transportation

Physical and mathematical models of analogue and digital control systems. The structure of the control system models. Negative and positive feedback.. System stability. Types of controllers. Choice of types, structure and parameters of PID controller. Modeling of the logical systems, both combinational and sequential. Physical models of robots and manipulators. Kinematic structure of manipulators. Kinematics and inverse kinematics. Basis of robot programming and control. Examples of robotic technologies applications.

Basic bibliography:

- 1. Domachowski Zygfryd ?Automatyka i robotyka?, Wydaw. Politechniki Gdańskiej, 2003
- 2. Honczarenko Jerzy ?Roboty przemysłowe. Budowa i zastosowanie?, WNT, Warszawa 2004
- 3. Ogata Kutsuhiko ?Modern Control Engineering?, Prentice-Hall International, 1997

Additional bibliography:

- 1. Głocki Wojciech ?Układy cyfrowe?, Wydawnictwa Szkolne i Pedagogiczne, 2010
- 2. Pełczewski Władysław ?Teoria sterowania?, WNT, Warszawa, 1980
