

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Proseminar		Code 1010632121010634114
Field of study Mechanical Engineering	Profile of study (general academic, practical) (brak)	Year /Semester 1 / 2
Elective path/specialty -	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: Second-cycle studies	Form of study (full-time, part-time) full-time	
No. of hours Lecture: 1 Classes: - Laboratory: - Project/seminars: -		No. of credits 1
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences Technical sciences		ECTS distribution (number and %) 1 100% 1 100%
Responsible for subject / lecturer: Prof. dr hab inż. Tomasz Dobski email: tomasz.dobski@put.poznan.pl tel. 61 665 2218 Maszyn Roboczych i Transportu Piotrowo 3, 60-965 Poznań		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Knowledge of the basics of writing papers and reports in the field of mechanics.
2	Skills	Is able to present a description and calculation of the basic thermodynamic processes of thermal energy conversion systems in gas industry.
3	Social competencies	Student knows restrictions of the own knowledge and the skill; understands the need for lifelong education
Assumptions and objectives of the course: To acquaint students with basic principles of writing of papers and reports in engineering works. Provide students practical skills of drafting of investigation results and preparing of scientific reports.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. Has an in-depth knowledge of how to prepare and describe engineering projects in energetic industry - [K2A_W04] 2. Knows how to analyze the thermodynamic and energetic processes - [K2A_W04]		
Skills:		
1. Is able to describe the development of systems and devices for efficient use of primary energy resources including the renewable energy - [K2A_U02] 2. Is able to freely use knowledge about thermodynamic phenomena occurring in the energy processes necessary for the effective conversion of thermal energy - [K2A_U04] 3. Is able to develop technical description, market offer and design documentation for a complex machine from the selected equipment group - [K2A_U016]		
Social competencies:		
1. Is aware of and understands the importance and impact of non-technical aspects of mechanical engineering activities and its impact on the environment and responsibility for own decisions - [K2A_K02] 2. Understands the need for lifelong learning; is able to inspire and organize the learning process of others - [K2A_K01]		
Assessment methods of study outcomes		
Lecture ? the written examination and presentation of solutions to the problem in the form of a report		

Course description		
the genesis of thesis topics, the role of the promoter, Sources of scientific and technical information and ways to use of them, formulating hypotheses, models and modeling, the structure of the thesis, the technique of writing research papers, editorial rules, preparation for the final exam, elements of scientific language: regularities, laws, theories, principles		
Basic bibliography:

Result of average student's workload		
Activity	Time (working hours)	
1. Participation in the lecture	15	
2. Fixing the lecture	5	
3. Consultation for the lecture	5	
4. Preparing to pass the lecture	10	
5. Participation in the completion of the lecture	2	
Student's workload		
Source of workload	hours	ECTS
Total workload	37	1
Contact hours	25	0
Practical activities	0	0
