

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Applied mathematics and mathematical methods		Code 1010612211010343531
Field of study Transport	Profile of study (general academic, practical) (brak)	Year /Semester 1 / 1
Elective path/specialty Railway Transport	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: Second-cycle studies	Form of study (full-time, part-time) full-time	
No. of hours Lecture: 2 Classes: 1 Laboratory: - Project/seminars: -		No. of credits 3
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art		ECTS distribution (number and %)
Responsible for subject / lecturer:		
dr Adam Marlewski email: adam.marlewski@put.poznan.pl tel. 61 6652763 Wydział Elektryczny ul. Piotrowo 3A, 60-965 Poznań		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	student knows, within the scope embraced by the mathematical training at the first-cycle studies, the concepts and techniques in matrix algebra, in differential and integral calculus, in linear ordinary differential equations, in probability and statistics
2	Skills	student knows how to 1) solve arbitrary systems of linear algebraic equations, 2) calculate derivatives and simple integrals, 3) obtain analytical solutions to basic ordinary differential equations
3	Social competencies	student 1) is aware of the importance of mathematics in the description of scientific and engineering problems, 2) understands the need for learning
Assumptions and objectives of the course:		
1) to familiarize students with the terminology and methods of higher mathematics presented in the course at hand, 2) to show they to see how presented topics are applied to exemplary problems discussed in engineering sciences		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. An extended knowledge of applied mathematics and mathematical methods in transport, including: - [K2A_W01] 2. numbers and functions (including their sequences and series, also in complex domain), calculus in one and several variables, , exemplary non-linear ordinary, as well as linear partial, differential equations, practical probability and statistics, mathematical decision support methods, game theory elements - [K2A_W01]		
Skills:		
1. An ability to find information in literature, internet, databases and other sources (in Polish and English), - [K1A_01] 2. A critical evaluation of results obtained in theoretical considerations and in calculations, incl. these produced by computers - [K1A_U18] 3. An art of preparation and delivering (in Polish and English) a verbal and multimedia presentation of trained subjects - [K1A_U05]		
Social competencies:		
1. The awareness of the importance of lifelong learning, also in mathematics (for the mathematics is the necessary language to describe technical devices and processes, hence in the high-tech world an engineer who does not dominate basic mathematics can not be conscious, and, in consequence, (s)he can not be creative) - [K2A_K01] 2. The awareness and understanding of the importance the mathematical education has in the professional activity (in particular, in technical and financial aspects, in short- and long-time horizon). - [-]		

Assessment methods of study outcomes		
Marks which are issued during classes (realized in a traditional way, with a chalk and blackboard) and given to homeworks (they may be prepared with computer assistance). Lectures are evaluated via final check; this is done in normal mode in written form, and in re-sit mode it can be also orally if a student is hopefully to bring a positive evaluation.		
Course description		
<p>Analytical geometry with elements of variational calculus (e.g. involute, brachistochrone, tautochrone, catenary and catenoid).</p> <p>2. Nonlinear ordinary differential equations (e.g., Legendre, Chebyshev, Laguerre, Hermite, Airy, Bessel equations, pendulum equation).</p> <p>3. Basic partial difference equations (2-dimensional wave, heat, Laplace equations).</p> <p>4. Exemplary difference and differential equations (Lotka-Volterra system).</p> <p>5. Mathematical methods for decision support (a.o. minimax and Bayesian ones, optimization of decision functions).</p> <p>6. Game theory (2- and many-player games, non- and cooperative games, games with non-complete information, zero-sum games, Pareto optimality, Nash optimality).</p> <p>Because of the number of teaching hours almost all topics will be presented in condensed form (so the course is really introductory); appr. 4, 5, 5, 4, 4 and 4 hours, resp.(they sum to 26 hours, last 4 hours of the lectures are to do final tests).</p> <p>Course content is prepared after rozporządzenie MNiSW z 12 lipca 2007 r., zał. nr 7 (Standardy kształcenia dla kierunku studiów: Transport), http://www.bip.nauka.gov.pl/_gAllery/24/24/2424/107_transport.pdf (accessed on 2010-03-02, 2012-09-20); Dziennik Ustaw nr 164, poz.1166</p>
