<b>Course description</b>

<p>-Nowadays information technology is based on semiconductor and ferromagnetic materials. Introduction and review of electronic devices in macroscopic scale. Quantum nature of the nanoworld . Introduced a variety of devices important in today?s nanotechnology. These have included semiconductor devices, tunnel junctions, magnetic devices and optical and electrical storage devices. Recently, a new branch of physics and nanotechnology , called magnetoelectronics, spintronics, or spin electronics, has emerged, which aims at simultaneously exploiting both the charge and the spin of electronics in the same devices. The aim of this lecture is to present basic ideas and recent developments in the new field of spintronics and also present new ideas.</p>
