

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Steel Structures		Code 1010104161010110073
Field of study Civil Engineering First-cycle Studies	Profile of study (general academic, practical) (brak)	Year /Semester 3 / 6
Elective path/specialty -	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: First-cycle studies	Form of study (full-time, part-time) part-time	
No. of hours Lecture: 20 Classes: 10 Laboratory: - Project/seminars: 12		No. of credits 6
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences		ECTS distribution (number and %) 6 100%
Responsible for subject / lecturer: dr inż. Katarzyna Rzeszut email: katarzyna.rzeszut@put.poznan.pl tel. 61 665 2097 Wydział Budownictwa i Inżynierii Środowiska ul. Piotrowo 5, 60-965 Poznań		Responsible for subject / lecturer: dr inż. Robert Studziński email: robert.studzinski@put.poznan.pl tel. 61 665 2098 Wydział Budownictwa i Inżynierii Środowiska ul. Piotrowo 5, 60-965 Poznań
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Knows the basic physical concepts as force, stress, strain, strength, knows the SI units, have basic knowledge in the field of structural mechanics and strength of materials in the area of ??study.
2	Skills	Converts algebraic and arithmetic, is fluent in mathematical analysis and used basic formulas in the field of structural mechanics and strength of materials.
3	Social competencies	Understand the need for lifelong learning and knows how to interact and work in a group.
Assumptions and objectives of the course: Gaining knowledge of the specific nature of the materials used in metal structures, technology and production process, material properties. In the frame of design of metal structures, learn the basic methods of connection's designing .		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. Knows the basics of technology used in the production of steel structure and their mechanical properties - [K1_W12] 2. Classifies grades of steels and steel elements depending on the required strength characteristics and technological conditions. It presents issues concerning corrosion protection and fire protection of steel structures - [K1_W12] 3. Identifies and characterizes types of welded and bolted connections and explains the calculation procedures - [K1_W07]		
Skills:		
1. Able to choose the grade of steel according to the selected design elements - [K1_U07] 2. Able to take the appropriate design and technological solutions in the field of corrosion and fire protection - [K1_U07] 3. Propose a design solution of the connections using the appropriate calculation procedure - [K1_U07]		
Social competencies:		
1. Understand the need for lifelong learning; able to inspire and organize the learning process of others - [K1_K06] 2. Able to interact and work in a group - [K1_K01] 3. Correctly identifies and resolves dilemmas associated to his profession - [K1_K07]		
Assessment methods of study outcomes		

<p>-evaluation of individual student projects combined with an oral defense of the thesis, test in the exercises (1 per semester - 1.5 hours) test in the lectures. (1 per semester - 1.5 hours) The evaluation scale: more than 100 excellent 91-100 very good (A) 81 - 90 good plus (B) 71 - 80 Good (C) 61 - 70 is sufficient plus (D) 51 - 60 satisfactory (E) insufficient under 50 (F)</p>		
Course description		
<p>Form of teaching: lecture Basic concepts and definitions for the design of metal structures. Types of steel used in construction and mechanical properties at natural and elevated temperatures. Corrosion of steel. Technology of production of steel and profiled steel. Assortment of hot-rolled , cold-rolled and welded members. Welded joints, technology of production and computational methods. Lap and butt screwed connections, design guidelines, technology, implementation and calculation algorithms. Design elements in compression and tension.</p> <p>Form of teaching: classes Examples of design of welded joints, the basic principles and methods of calculation. Examples of design of bolted joints, assumptions and analysis.</p> <p>Form of teaching: projects Project of selected welded and bolted joints.</p>		
Basic bibliography:		
<ol style="list-style-type: none"> 1. Konstrukcje metalowe cz.1 , Łubiński, Filipowicz, Żółtowski, Arkady, Warszawa, 2000 2. Połączenia śrubowe, Biegus , Wyd. PWN, Warszawa, 1997 3. Tablice do projektowania konstrukcji metalowych, Bogucki, Żybertowicz, Arkady, Warszawa, 1996 		
Additional bibliography:		
<ol style="list-style-type: none"> 1. Projektowanie konstrukcji stalowych, Kurzawa, Chybiński, Wydawnictwo PP, Poznań, 2008 		
Result of average student's workload		
Activity	Time (working hours)	
1. Participation in lectures	20	
2. Participation in exercise classes	8	
3. Participation in design classes	12	
4. Complete (at home) works involved in the project	35	
5. Participation in the consultations of the exercise and design classes	5	
6. Preparing to the test in the field of lectures	25	
7. Preparing to the test in the field of exercise classes	25	
Student's workload		
Source of workload	hours	ECTS
Total workload	150	6
Contact hours	47	2
Practical activities	50	2
