## Assessment methods of study outcomes

Student's knowledge are assessed based on a written pass, which takes place on the last lectures per semester (according to the plan of studies).

The written pass consists of three questions and takes 45 minutes.

Information about the form and date of test and its duration shall be provided to students during the first lecture in the semester.

Student's skills are evaluated on the basis of performed project, and its qualitative assessment is based on essential and aesthetic performing of drawing and computational exercise (the subject and content of the project is given on the theme card).

Completion date of the project is the last design tutorial in the semester.

#### Course description

Basic classification and description of road intersections and grade separated junctions (one-, two- and multi-level crossing). The types of traffic maneuvers at junctions and road interchanges, their impact on the collision and traffic safety.

Principles of design of geometric details of road intersections and grade separated junctions.

Types of cross section for slip road. Basic methods of used traffic management systems (traffic signing and road marking).

# Result of average student's workload

Activity	Time (working hours)			
1. Direct participation of the student in the lectures.	15			
2. Direct participation of the student in the design classes.	15			
3. Additional consultation with the teacher.	10			
4. Independent execution of the project.	35			
5. Learning student to prepare himself to pass the exam.	24			
6. Direct participation of the student in the writing pass.	1
