

<b>STUDY MODULE DESCRIPTION FORM</b>		
Name of the module/subject <b>Heat Engineering and Heat Measurements</b>		Code <b>1010102211010130183</b>
Field of study <b>Environmental Engineering Second-cycle</b>	Profile of study (general academic, practical) <b>(brak)</b>	Year /Semester <b>1 / 1</b>
Elective path/specialty <b>Heating, Air Conditioning and Air Protection</b>	Subject offered in: <b>Polish</b>	Course (compulsory, elective) <b>obligatory</b>
Cycle of study: <b>Second-cycle studies</b>	Form of study (full-time, part-time) <b>full-time</b>	
No. of hours Lecture: <b>30</b> Classes: <b>15</b> Laboratory: <b>30</b> Project/seminars: <b>-</b>		No. of credits <b>6</b>
Status of the course in the study program (Basic, major, other) <b>(brak)</b>		(university-wide, from another field) <b>(brak)</b>
Education areas and fields of science and art <b>technical sciences</b>		ECTS distribution (number and %) <b>6 100%</b>
<b>Responsible for subject / lecturer:</b> Prof. dr hab. inż. Czesław Oleśkiewicz-Popiel email: czeslaw.oleskowicz-popiel@put.poznan.pl tel. 061 6652-537 Faculty of Civil and Environmental Engineering ul. Berdychowo 4, 61-131 Poznań		<b>Responsible for subject / lecturer:</b> Dr inż. Krzysztof Bober email: krzysztof.bober@put.poznan.pl tel. 61 6652-034 Faculty of Civil and Environmental Engineering ul. Berdychowo 4, 61-131 Poznań
<b>Prerequisites in terms of knowledge, skills and social competencies:</b>		
1	<b>Knowledge</b>	Mathematics: differential and integral equations and their solutions. Physics at level 5KRK. Thermodynamics at level 6KRK.
2	<b>Skills</b>	Application of differential and integral description of physical phenomena, solution of differential equations. Thermodynamics: analysis of thermodynamic problems and realization of measurements and investigations at level 6 KRK
3	<b>Social competencies</b>	Awareness of the need of permanent updating and supplementing knowledge and engineering skills.
<b>Assumptions and objectives of the course:</b> Extension of knowledge and skill of basic heat engineering and experimental techniques used in build and natural environmental engineering.		
<b>Study outcomes and reference to the educational results for a field of study</b>		
<b>Knowledge:</b>		
1. Student gains a wider knowledge and skills concerning heat engineering and measurements needed for solving advanced thermodynamic problems in environmental engineering appearing in build and natural environment. - [-]		
2. Student knows methods and thermal properties needed for theoretical and design solution of thermodynamic problems appearing in environmental engineering. - [K2_W03, K2_W04, K2_W07]		
3. Student knows methods and thermal properties needed for theoretical and design solution of thermodynamic problems appearing in environmental engineering. - [K2_W03, K2_W04, K2_W07]		
4. Student knows rules of calculation of energy balances, heat losses and heat efficiency concerning equipment and systems in environmental engineering. - [K2_W03, K2_W04, K2_W07]		
5. Student knows an advanced knowledge concerning development tendencies and new achievements in heat equipment and processes in environmental engineering. - [K2_W03, K2_W04, K2_W07]		
<b>Skills:</b>		

1. Student can find and estimate information taken from literature and internet concerning heat engineering equipment appearing in environmental engineering. - [K2\_U01, K2\_U18]
2. Student can find adequate relationships describing analysed heat processes. - [K2\_U01, K2\_U18]
3. Student knows how determine thermodynamic properties needed for calculations. - [K2\_U01, K2\_U18]
4. Student can recognize and solve advanced design and operation problems occurred in heat equipment. - [K2\_U01, K2\_U18]
5. Student can critically estimate a design solution and recognize a danger hazard in erected and operated heat equipment. - [K2\_U01, K2\_U18]
6. Student can plan and realize operating tests and prototype investigations equipment appearing in environmental engineering.. - [K2\_U01, K2\_U18]
7. Student can determine an accuracy and analyse obtained results of calculation and measurements. - [K2\_U01, K2\_U18]
8. Student can critically analyse obtained results of calculations and measurements and develop conclusions. - [K2\_U01, K2\_U18]
9. Student can develop a detailed energy balance, calculate heat efficiency and heat losses of analysed equipment. - [K2\_U01, K2\_U18]

**Social competencies:**

1. Student understand a team cooperation in solved problems. - [- K2\_K03]
2. Student is aware of the range and limits of the used calculation methods and relationships as well as importance of possessed theoretical and practical knowledge. - [- K2\_K03]
3. Student understands a need of examination and verification of results of used calculation and experimental methods.. - [- K2\_K03]
4. Student is aware of need of innovation. - [- K2\_K03]

**Assessment methods of study outcomes**

Lecture:

The final exam consists of two parts:

Part 1: Test of understanding of fundamentals of heat engineering (3 to 5 questions).

Part 2: Test of competence conc. solving of heat engineering problems (1 to 3 problems).

In some cases an oral examination is used. Also an activity of students during lectures and tutorials is taken into account.

Tutorials:

45-minute of written final test at the end of semester.

Continuous assessment of student activity during each tutorial (reward of activity).

Laboratory training (exercises):

15 minute short entrance test before each laboratory training and final assessment of the written report and eventual oral presentation of the results.

**Course description**

Introduction, subject contents. Thermodynamic system and control volume. International scale of temperature. Amount of substance. Ideal and real gas equation of state. Mass and energy conservation. Examples of gas mixtures: air, flues. Energy of the system, internal energy. Energy of fluid flow, enthalpy. Heat specific of ideal and real gas, model of semi ideal gas. Gibbs and Meyer equations. First law of thermodynamics. Second law of thermodynamics. Entropy, principle of increase of entropy. Typical thermodynamic processes. Work and heat of the thermodynamic process. Calculations of the entropy increases of ideal, semi ideal and real gases, entropy charts (T-s). Energy balance of the fluid flow machinery. Comparison of isentropic compression of ideal and real gases. Water vapour, processes of water vapour. Water vapour enthalpy chart. Properties of liquid and vapour water, tables, charts and computer program. Throttling of ideal gases, application of throttling process. Properties and processes of humid air, psychrometric chart, measurements of relative humidity. Combustion: properties of fuels, stoichiometric equations of combustion, excess of air, calculation and measurement of content of combustion fumes, dew point temperatures of flue gases, enthalpy of formation, calculation and measurements of higher and lower heating values. Adiabatic flame temperature. Efficiency of combustion chamber, control of combustion process. Typical thermodynamic cycles: Carnot, Otto, Diesel and Joule. Clausius-Rankine cycle, organic Rankine cycle (ORC cycles), power and heat cogeneration systems. Linde cycle, refrigeration and heat pump coefficient of performance (COP). Application of thermodynamic relations. Adiabatic throttling, Joule-Thomson effect, calculation of the Joule-Thomson coefficient. Maximum reversible work, definition and application of exergy. Measurement of temperature of high velocity gas (total and static enthalpy). Principle of the thermodynamic gas dynamics, Bendemann and de Laval nozzles, application to the flow rate measurements. Pressure losses in short and long pipes.

**Result of average student's workload**

Activity	Time (working hours)
1. Lecture	30
2. Tutorials	15
3. Laboratory training (exercises)	30
4. Preparation to tutorials	20
5. Development of laboratory reports	17
6. Consultations	3
7. Preparation to final tutorial test	10
8. Preparation to examination test	15

**Student's workload**

Source of workload	hours	ECTS
Total workload	140	6
Contact hours	80	3
Practical activities	82	3
