

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Atmosphere monitoring		Code 1010101271010137727
Field of study Environmental Engineering First-cycle Studies	Profile of study (general academic, practical) (brak)	Year /Semester 4 / 7
Elective path/specialty -	Subject offered in: Polish	Course (compulsory, elective) elective
Cycle of study: First-cycle studies	Form of study (full-time, part-time) full-time	
No. of hours Lecture: 10 Classes: - Laboratory: - Project/seminars: -		No. of credits 1
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences		ECTS distribution (number and %) 1 100%
Responsible for subject / lecturer: dr inż. Marek Juszcak email: marek.juszcak@put.poznan.pl tel. 61 6653494 Faculty of Civil and Environmental Engineering ul. Piotrowo 5 60-965 Poznań		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Basic processes and chemical reactions. Flows of compressible fluid and incompressible in pipes and open channels. Mass forces, the forces of friction. Intermolecular forces. Fundamentals of adsorption, absorption and combustion. Equation of state of gas. And second law of thermodynamics.
2	Skills	Measurements of temperature, pressure, gas flow. Solving simple problems from fluid mechanics (gas) and thermodynamics
3	Social competencies	Ability to work in a team. Awareness of the need for continuous replenishment of knowledge and skills.
Assumptions and objectives of the course: -Assumptions and objectives of the course: -Broaden and deepen the knowledge and skills of a systemic approach to the prevention of air pollution and the active development of air quality, especially in urban structure		
Study outcomes and reference to the educational results for a field of study		
Knowledge: 1. The student knows and understands the processes associated with the dispersion of pollutants emitted from sources of high and low - [[K2_W01, K2_W07]] 2. The student knows and understands the processes that affect air quality in the urban agglomeration - [[K2_W01, K2_W05]] 3. The student has knowledge of atmospheric monitoring, standards and indicators of air quality and odorymetrii - [[K2_W05, K2_W06]] 4. The student knows the principles and mechanisms of basic techniques reduce nuisance emissions of dust, gas and odor - [[K2_W04, K2_W06]]		
Skills: 1. Student is able to develop and study of air protection - [[K2_U03, K2_U08]] 2. The student is able to determine the effect of building structures and technical conditions for emission dispersion of pollutants from point sources and low mobile - [[K2_U01, K2_U03, K2_U04; K2_U11]] 3. The student is able to determine the impact of natural and anthropogenic factors (including the structure of energy supply, urban structure, emissions) on air quality in the city - [[K2_U01, K2_U03, K2_U04; K2_U10]] 4. The student is able to design the optimal technology to improve air quality - [[K2_U14, K2_U18]]		
Social competencies:		

1. The student understands the complexity of the technical environment? the natural and the need for cooperation of specialists from different fields to solve theoretical and practical problems - [[K2_K02, [K2_K07]]]
2. The student is aware of the responsibility of environmental protection specialist for the quality of life especially in the urban agglomeration - [[K2_K02, K2_K04]]
3. Student recognizes the need for systematic and deepen and broaden their knowledge and skills - [[K2_K01]]

Assessment methods of study outcomes

-lecture:

written exam - duration 70 minutes. ; Individual possible discussion after the results of the written work; Evaluation of written work - based on points earned from individual tasks; Bonus activity during lectures; taking into account assessments of the exercises in the final assessment

-ćwiczenia design:

Ongoing control of the project during exercise and consultation; completion of the project on the basis of an oral defense of the work.

-Laboratory exercises:

job control before exercise (entrance fee); checking in progress; report of the exercises; discussion during the counting exercise.

Course description

-The spread of pollutants from point emitters, mathematical model of Euler; boundary conditions and simplifying assumptions? formula calculation Pasquile? a? Sutton. Determination of instantaneous concentrations, medium and frequency exceeding the established concentrations of gases according to the formula Pasquile? A? Sutton; the notion of roughness of the terrain, diffusion coefficients, the apparent height of the emission determination influx of dust.

Chemical processes in the plume, precipitation and leaching of contaminants from streaking phenomenon of flow around buildings, shade and trace aerodynamic. Emitters low dispersion of pollutants from low emitters and in the canyon street model boxed; load emission (Emission).

Environmental aspects of internal and external affecting the air quality in the urban area.

Energy analysis and ecological accordance with the procedure LCA, supply structure in the energy of the city.

Energy balance of the city; natural and anthropogenic components of the balance sheet, their characteristics. Urban heat island, source, structure, consequences analysis. City island pollution sources, variability.

Photochemical reactions in the atmosphere; photochemical smog and acid.

Air quality standards expressed immission values ??of permissible concentrations of selected pollutants; upper and lower assessment threshold. Air Quality Index (AQI) Energy and Air Quality Indicator (EAQI).

Monitoring atmospheric; principle of location of measuring stations. Remote measurement of concentrations: the principle of absorption spectroscopy? DOAS and Differential Absorption? DIAL.

Physiological characteristics of the odor, the basic concepts related to the assessment of odor; Source odorów. Metody measurements of odor - odorymetria; electronic nose.

The principles and mechanisms underlying technologies pollution reduction odor.

Topics design exercises:

study of air protection for the agglomeration of several sources of emissions.

Topics of laboratory exercises:

Educational trips:

1. Elektrociepłownia Poznań Karolin EC-II, along with the installation of semi-dry flue gas desulphurisation

2. Automatic immission measuring station concentrations of air pollutants

3. Laboratoria Provincial Inspectorate for Environmental Protection

exercise laboratory

Research dispersion of pollutants from point sources and low line - physical model
