

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Electronics and Power Electronics		Code 1010325311010323752
Field of study Electrical Engineering	Profile of study (general academic, practical) general academic	Year /Semester 1 / 1
Elective path/specialty -	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: Second-cycle studies	Form of study (full-time, part-time) part-time	
No. of hours Lecture: 20 Classes: - Laboratory: 10 Project/seminars: -		No. of credits 4
Status of the course in the study program (Basic, major, other) major		(university-wide, from another field) from field
Education areas and fields of science and art technical sciences Technical sciences		ECTS distribution (number and %) 4 100% 4 100%
Responsible for subject / lecturer: dr hab. inż. Ryszard Porada, prof. nadzw. email: ryszard.porada@put.poznan.pl tel. 48 61 665 2360 Wydział Elektryczny ul. Piotrowo 3A 60-965 Poznań		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	It has basic knowledge from mathematics, physics, the electrotechnology, the electronics and the power electronics
2	Skills	It knows to apply the knowledge from the range of mathematics, physics, electrical engineering, electronics and power electronics
3	Social competencies	There has the consciousness of the necessity of extending of her competences, a readiness to collection of the cooperation within the framework of the group
Assumptions and objectives of the course: The introduction with the operation, with properties, with characteristics and methods of analysis and designings of complex and special electronic systems and of power electronics		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. to use the knowledge on the subject constructions and operations of power electronics systems and their uses in chosen branches of industry - [K_W12+++]		
2. to characterize advanced criteria of the analysis and the synthesis for simple and complex power electronics systems - [K_W12 +++ K_W18 ++]		
Skills:		
1. to use the knowledge within the range constructions and mechanisms of action of elements and power electronics systems - [K_U03 ++ K_U06 +++]		
2. to use known methods and mathematical models and computer simulations to the analysis and the evaluation of the operation of elements and advanced power electronics systems - [K_U06++ K_U12 ++]		
Social competencies:		
1. Has the consciousness of the importance and the understands different aspects and results of activity of electrician engineer in this of the influence on the medium, and related to this of the responsibility for undertaken decisions - [K_K01 ++]		
Assessment methods of study outcomes		

<p>Lecture</p> <p>? the credit of the lecture preceded with the credit of occupations laboratory exercises and project,</p> <p>Designing work and laboratory exercises:</p> <p>? the test and awarding the knowledge of need-to-know to realization of placed problems in the given area of tasks,</p> <p>? verification skills on every exercises</p> <p>? evaluation of the knowledge and skills related to the realization of laboratory exercise, the evaluation of the report from done exercises.</p> <p>Obtaining additional points for activity during exercises, in particular way for:</p> <p>? proposing to discuss additional aspects of the subject</p> <p>? effective use of knowledge obtained during solving of given problem;</p> <p>? comments related to improve teaching material,</p> <p>? aesthetics of solved problems and reports ? within homework.</p>		
Course description		
<p>Complex power electronics rectifier systems - the operation, the mathematical description, characteristics. Systems of thyristor rectifier reversing - compensatory currents and their restriction. Direct converters of the frequency (cycleconvertors). Matrix converters. Power electronics feed systems with the direct current. Feeders stabilized. AC/DC converters , resonant converters, DC/AC converters. Power electronics systems of warranted feed. Modern methods and technologies of the improvement of the quality of the feed. Active systems compensation. Converters about improved energy indicators.</p>

Result of average student's workload		
Activity	Time (working hours)	
1. participation in the lectures	30	
2. participation in the laboratory exercises	15	
3. participation in consultations on the lecture	10	
4. participation in consultations on the laboratory exercises	10	
5. preparation for the laboratory exercises	15	
6. preparation for the exam	20	
7. preparation for the laboratory exercises pass	10	
8. participation in the exam	5	
Student's workload		
Source of workload	hours	ECTS
Total workload	110	4
Contact hours	70	2
Practical activities	15	1
