

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Electric Power Systems - Operation and Control		Code 1010312331010314897
Field of study Electrical Engineering	Profile of study (general academic, practical) (brak)	Year /Semester 2 / 3
Elective path/specialty Electric Power Systems	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: Second-cycle studies	Form of study (full-time, part-time) full-time	
No. of hours Lecture: 15 Classes: - Laboratory: 15 Project/seminars: -		No. of credits 3
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences Technical sciences		ECTS distribution (number and %) 3 100% 3 100%
Responsible for subject / lecturer: dr inż. Ireneusz Grządzielski email: ireneusz.grzadzieski@put.poznan.pl tel. 61 665 2392 Faculty of Electrical Engineering Piotrowo 3A, 60-965 Pozna		Responsible for subject / lecturer: dr inż. Bogdan Staszak email: bogdan.staszak@put.poznan.pl tel. 61 665 2635 Faculty of Electrical Engineering Piotrowo 3A, 60-965 Poznań
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Possesses basic knowledge of the theory of electrical circuits, electromagnetic field, electrical machines, High voltage techniques, electric power engineering and electrical power generation
2	Skills	Has effective self-study ability in the domain of the chosen field of studies, is able to integrate the knowledge acquired at the credited courses
3	Social competencies	Is aware of the need to develop his knowledge and competencies, is ready to undertake the cooperation and team work
Assumptions and objectives of the course: Getting knowledge of the electric power system operation under transient operating conditions, electric power system stability investigations under both the small disturbances and the instantaneous high disturbances in the active power balance. Stability enhancement means. Practical service of the program DAKAR in the scope of transient states analysis for low and large disturbance as well as during system failures.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. Has widened and deepened knowledge of some fields of mathematics including discrete and applied math elements - [K_W01++]		
2. Has widened knowledge of the electric power system construction and operation - [K_W16+++]		
Skills:		
1. Can use acquired mathematical techniques and models, modifying it if necessary, to analyze and to design electrical elements, devices and systems - [K_U06++]		
2. Can plan and carry out the simulation and measurements of basic electric parameters as well as to extract parameters describing materials, electrical elements and systems - [K_U09++]		
Social competencies:		
1. Understands the need to formulate and transfer to the society, using also the mass media, the information and opinions related to the electrical engineering achievements - [K_K02++]		
Assessment methods of study outcomes		

<p>Lectures:</p> <ol style="list-style-type: none"> 1. Assessment of the knowledge and skills shown at the written and oral examinations , 2. Continuous assessment during courses (bonus for activity and perception quality). <p>Laboratory:</p> <ol style="list-style-type: none"> 1. Test of the knowledge necessary to deal with problems posed in the lab tasks. 2. Assessment of the knowledge and skills related to the lab task completion, 3. Assessment of the task report. 		
Course description		
<p>Lectures : Transient states in electric power system: types of states, system disturbances. Scope of the transient states' study and analysis. Models of the System elements for the transient analysis needs. Electric power system stability. Small swing of the generators' rotor - local angle stability. Power-angle characteristics- application of the I Lapunov rule. Influence of the voltage regulation on local stability. Stability under the large instantaneous disturbance of the active power balance - global angle stability. Application of the indirect Lapunov rule. Voltage stability - voltage stability conditions. Stability enhancement means.</p> <p>Laboratory: involves experiments carried out using the DAKAR program, in the scope of steady states and of the transient states of in the transmission and distribution networks of the electric power system described during lectures.</p>

Result of average student's workload		
Activity	Time (working hours)	
1. participation in lecture courses	15	
2. participation in labs	15	
3. participation in discussions related to lectures	5	
4. participation in discussions related to labs	5	
5. preparation to labs	6	
6. lab reports	6	
7. preparation to examination	10	
8. taking an examination	3	
Student's workload		
Source of workload	hours	ECTS
Total workload	65	3
Contact hours	40	1
Practical activities	34	1
