

<b>STUDY MODULE DESCRIPTION FORM</b>		
Name of the module/subject <b>Building automation systems</b>		Code <b>1010312331010316104</b>
Field of study <b>Electrical Engineering</b>	Profile of study (general academic, practical) <b>general academic</b>	Year /Semester <b>2 / 3</b>
Elective path/specialty <b>Distribution Devices and Electrical</b>	Subject offered in: <b>Polish</b>	Course (compulsory, elective) <b>obligatory</b>
Cycle of study: <b>Second-cycle studies</b>	Form of study (full-time, part-time) <b>full-time</b>	
No. of hours Lecture: <b>15</b> Classes: <b>-</b> Laboratory: <b>15</b> Project/seminars: <b>-</b>		No. of credits <b>3</b>
Status of the course in the study program (Basic, major, other) <b>other</b>		(university-wide, from another field) <b>university-wide</b>
Education areas and fields of science and art <b>technical sciences</b> <b>Technical sciences</b>		ECTS distribution (number and %) <b>3 100%</b> <b>3 100%</b>
<b>Responsible for subject / lecturer:</b>  prof. dr hab. Aniela Kamińska-Benmechemene, prof. nadzw. email: anIELa.kaminska@put.poznan.pl tel. 61 665 26 67 Wydział Elektryczny ul. Piotrowo 3A 60-965 Poznań		
<b>Prerequisites in terms of knowledge, skills and social competencies:</b>		
1	<b>Knowledge</b>	Basic knowledge on control algorithms, automation, information technology, electrical devices and installation.
2	<b>Skills</b>	Able to perform mathematical analysis of simple electrical circuits and read electrical wiring schemes.
3	<b>Social competencies</b>	A sense of the need to broaden the competence and willingness to work together in a team.
<b>Assumptions and objectives of the course:</b> Knowledge of rules and possibilities of building installation control directed towards on energy efficiency and improving comfort of building utilization. Purchase of skills to design building automation systems (BAS), security management systems (SMS) and its integration (BMS). Purchase of skills to programming and testing simple building installation on the example of KNX system.		
<b>Study outcomes and reference to the educational results for a field of study</b>		
<b>Knowledge:</b>		
1. Knows the rules of operation, realization and programming selected building automation systems, especially KNX system. - [K_W03 ++, K_W08 +++]		
2. Knows the basic rules of operation and designing security management systems: Intrusion System, Fire Alarm System, Access Control and CCTV. - [K_W03 ++, K_W08 +++]		
3. Knows the basic rules of integration of BAS and SMS. - [K_W08 ++]		
<b>Skills:</b>		
1. Able to perform the control methods of selected installation and devices, select KNX devices allowing realization of this control. - [K_U13+++ , K_U15+++]		
2. Able to perform the security systems and its configuration depending on the specific characteristic of building. - [K_U13+++ , KU_15+++ ]		
3. Able to programming and testing the applications of KNX system and develop integration with selected security system of building. - [K_U10+++ , K_U13+++ ]		
<b>Social competencies:</b>		

1. A sense of need for application and development of building automation systems directed towards on energy efficiency, improving comfort and security of building using. - [K\_K01+++]  
 2. Able to work in team developing complex electrical installation and control. - [K\_K02 ++]

<b>Assessment methods of study outcomes</b>	
<p>Lecture:                      Skills assessment of:                      ? general rules of operation, realization and programming building automation systems, especially KNX system,                      ? general rules of operation and designing building security systems,                      ? building automation and security systems developing and integration for given assumptions.</p> <p>Laboratory exercises:                      Assessment of:                      ? knowledge of devices selection and developing connection for application specified by teacher,                      ? knowledge realization of devices connection in specified application,                      ? controller programming for specified application,                      ? application functionality and testing.</p> <p>Getting extra points for the activity during seminar, and in particular for:                      ? individual or teamwork design complex automation and security systems for selected building,                      ? realization and programming selected application in laboratory,                      ? testing of application.</p>	
<b>Course description</b>	
<p>Characteristics of building automation systems. Lighting, heating and blind control using KNX system ? principles of functioning, designing and programming. Rules of operation and designing Intrusion System, Fire Alarm System, Access Control and CCTV. Integration of automation system and security system.</p>

<b>Result of average student's workload</b>	
Activity	Time (working hours)

1. participation in the class lecture	15	
2. participation in the laboratory exercises	15	
3. participation in the consulting on the lecture and laboratory exercises	8	
4. preparation to the laboratory exercises	8	
5. preparation of practical exercises report	10	
6. preparation to the written exam	20	
7. participation in the exam	2	
<b>Student's workload</b>		
<b>Source of workload</b>	<b>hours</b>	<b>ECTS</b>
Total workload	78	3
Contact hours	40	2
Practical activities	25	1
