Knowledge of real function calculus. Equations of selected			
1 Knowledge of real function calculus. Equations of selected	cies:		
	1 Knowledge Knowledge of real function calculus. Equations of selected curves on the plane.		
2 Skills Calculation of the function limits, the calculation of derivation functions.	, the calculation of derivatives and integrals of one variable		
3 Social Focus on expanding knowledge and learn new skills in o professional and social life.	Focus on expanding knowledge and learn new skills in order to participate more fully in professional and social life.		
Assumptions and objectives of the course: 1). Understanding the key concepts and applications of calculus of functions of several	variables.		
2). Knowledge of methods of solving equations and systems of ordinary differential equ3). Understanding the elements of the series theory, in particular the power series and			
Study outcomes and reference to the educational result			
Knowledge:	·		
1. The student obtains a basic knowledge of the partial derivatives and the total different [K_W01] $$			
2. The student has knowledge about the methods of calculation and applications of mu and analyze physical phenomena $[K_W01]$	Itiple and curved integrals to describe		
3. He has knowledge of power series representation and Fourier series representations			
 He has knowledge about methods of solving differential equations and systems of or Skills: 	dinary differential equations [K_W0		
 The student can apply partial derivatives to study local extremes and to indicate the two variable function - [K_U10] 	direction of the fastest growth of the		
2. The student can use a total differential of a function in approximate calculations [k	(_U10]		
3. The student can calculate and apply multiple and curvilinear integrals to describe an phenomenons $[K_U10]$	d analyze selected physical		
4. The student can solve simple ordinary differential equations of the first, second and l	nigher order [K_U10]		
Social competencies: 1. The student is aware of the usefulness of mathematical competence in engineering provide the student is a statement of the student			
2. The student is able to reflect and critically assess their own achievements [K_K03]	vractice - [K K01]		

Assessment methods of study outcomes		
Lecture. A two-part written examination at the end of the semester:		
- Sat. 1 knowledge test (3 questions)		
- Sat. 2 test of skills (3 jobs).		
Method of evaluation: Each of the two parts of the test is evaluated in a s Duration of test: 60 minutes.	coring system using a scal	e of 0-15 points.
TUTORIALS:		
- 2 colloquia written during the semester (7 and 14 weeks), each rated or	n a scoring system,	
- continuous evaluation for each course.		
Course descripti	on	
1). The concept of a function of several variables, field, graph, limit of a function	unction at a point.	
2). Differential calculus of functions of several variables with selected app derivative, differential complete, local extremes).	blications in engineering pra	actice (directional
3). Integral calculus of functions of several variables with selected application	ations in engineering practi	ce.
4). Curvilinear integrals with applications in engineering practice.		
5). Power series, the concept of convergence of the series, the study of c selected types of functions in power series or Fourier series.	convergence. Fourier series	. The development of
