

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Ergonomics in OHS management systems		Code 1011102231011127664
Field of study Safety Engineering - Full-time studies - Second-	Profile of study (general academic, practical) (brak)	Year /Semester 2 / 3
Elective path/specialty Work Safety Management	Subject offered in: Polish	Course (compulsory, elective) elective
Cycle of study: Second-cycle studies	Form of study (full-time, part-time) full-time	
No. of hours Lecture: 15 Classes: 30 Laboratory: - Project/seminars: 15		No. of credits 3
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art		ECTS distribution (number and %)
Responsible for subject / lecturer:		
<p>dr hab. inż. Aleksandra Kawecka-Endler, prof. nadzw. email: aleksandra.kawecka-endler@put.poznan.pl tel. 61- 6653370 Faculty of Engineering Management ul. Strzelecka 11 60-965 Poznań</p>		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	The student has knowledge of the basic tools to identify ergonomic risk factors
2	Skills	The student can identify ergonomic risk factors in a particular workplace
3	Social competencies	The student is able to associate the discomfort and musculoskeletal diseases with the exposure to ergonomic hazards
Assumptions and objectives of the course:		
Aim of the course: the acquisition of knowledge, skills and social competence in the field of principles building and maintaining an ergonomic program in the organization as well as its role in health care. Teaching skills to perceive occupational hazards that are related to the way the work is performed		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. The student knows the factors determining the state of security, methods and mechanisms of safety, forecasting the safety, preventive measures for the safety, ways to restore an acceptable state of safety and rules for building and maintaining "the ergonomic program" in the organization and preparation for implementation in practice - -[K2A_W13]		
Skills:		
1. Can acquire, integrate, interpret data from literature, database or other properly matched sources, both in English or other foreign language accepted as an international language of communication within Safety Engineering, as well as to draw conclusions, formulate and justify opinions - -[K2A_U1]		
2. Can apply various techniques in order to communicate in occupational environment and other environments - -[K2A_U2]		
3. Can create, both in English and Polish language, a well- documented report of problems within Safety Engineering, which present the results of their own research - -[K2A_U3]		
4. Can prepare and give oral presentation relating to detailed issues within the realm of Safety Engineering in Polish and other foreign language - [[K2A_U4]		
5. Has self-study ability and comprehends it - [[K2A_U5]		
6. Student can apply information-communicative techniques to deal with tasks that are typical of engineering activity - [[K2A_U7]		
Social competencies:		

1. Understands the need and knows means how to self-study (first, second and third cycle studies, postgraduate studies, qualification courses)- improving professional, personal and social competence; can argue the need to learn for the whole life - [[K2A_K1]]
2. Student is fully aware of the responsibility that he has taken for his own work and expresses readiness to comply with the rules of team work as well as responsibility for mutually realized and completed tasks - [[K2A_K3]]
3. Can determine some causal relationships in the process of targets implementation and rank pertinence of alternative or competitive tasks - [[K2A_K4]]

Assessment methods of study outcomes

Formative assessment:

Classes: presentation (PP) of the research results (ongoing)

Lectures: written tests

Collective assessment:

Classes and projects: average of the achieved marks and preparation of a project (basis for credits)

Lectures: average of test grades

Course description

- ergonomics and its contribution to the shaping of working conditions
- impact of work conditions and work organization on employee safety
- occupational accidents and diseases, socio-economic effects
- structure of the ergonomic program, selected elements of the program
- occupational risk, assessment and limitation Labor Safety
- Occupational Safety Management System
- ergonomics prevention in documents and standardization

Basic bibliography:

1. Bezpieczeństwo pracy i ergonomia (red. D. Koradecka), CIOP, Warszawa 1999.
2. Górka E., Ergonomia, Oficyna Wydawnicza Politechniki Warszawskiej, Warszawa 2007.
3. Karczewski J., Karczewska K., Zarządzanie bezpieczeństwem pracy, ODiDK Gdańsk 2012.
4. Rączkowski B., BHP w praktyce, Wyd. ODiKK Gdańsk, 2017.

Additional bibliography:

1. Kawecka-Endler A., Mrugalska B., Praktyczne aspekty projektowania ergonomicznego w budowie maszyn, Wydawnictwo Politechniki Poznańskiej, Poznań 2011.
2. Tytyk E., Projektowanie ergonomiczne, PWN Warszawa 2001.

Result of average student's workload

Activity	Time (working hours)
1. Participation in lectures	15
2. Participation in classes	30
3. Participation in projects	15
4. Preparation for lab classes	5
5. Preparation for project	10
6. Preparation for the lectures based tests	5
7. Preparation of the materials for classes	8
8. Overview of credit results (lectures)	2

Student's workload

Source of workload	hours	ECTS
Total workload	90	3
Contact hours	60	2
Practical activities	30	1
