Preparing reports of practices

Presentation of the Report of practices to the tutor

Course description

Faculty of Engineering Management						
1. Presentation of the company:						
- Legal form of organization,						
- Used technology						
- List of identified risks.						
2. The organizational structure of the company.						
3. Analysis of the safety management system: management and administration in the field of corporate safety; processes, training managers and other employees; planned safety inspections and maintenance equipment; analysis of critical tasks and work procedures; investigation of accidents; auditing work processes; to prepare the company for emergency situations; safety rules and work permit; analysis of accidents; the processes of selection, implementation and use of personal protective equipment; health and safety in the company; Internal audits of the safety management system; technology and change management; interpersonal communication and group OSH; promotion of work safety issues in the company; selection and preparation of employees for work; management of purchases of materials and services; security outside of work.						
4. The organization of work at the workplace.	o division of the select	ad aparation				
 I asks performed on the selected workstation (types and different operations, the division of the selected operation treatments, activities and movements of the work) 						
- Standard work (quantitative or temporary) way of defining and updating,						
- Supervising of the job,						
- Plans of workstations, selection of methods and tools, the use of collective prot	ection means/ individu	al means				
- Maintenance organization position (supply of material and tools, transport, main works for the position and settlement of completed tasks).	- Maintenance organization position (supply of material and tools, transport, maintenance and repair, quality control, issuing works for the position and settlement of completed tasks).					
5.Ergonomics at workstation:						
- Assessment of work position,						
- Static and dynamic loads,	- Static and dynamic loads,					
- Design work zones upper and lower limbs,						
- The rhythm and pace of work (issues monotony)						
- Interruptions and allowed to rest (fatigue problems)						
- Physical parameters of the environment (physical, chemical, biological)						
- Non-material factors working environment (psychosocial risks).						
 Project for raising the level of safety in the workplace and / or organization (ac culture). 	tion towards the develo	opment of a safety
