

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Pro-quality Systems Engineering		Code 1011105311011125143
Field of study Engineering Management - Part-time studies -	Profile of study (general academic, practical) (brak)	Year /Semester 1 / 1
Elective path/specialty Quality Systems and Ergonomics	Subject offered in: Polish	Course (compulsory, elective) elective
Cycle of study: Second-cycle studies	Form of study (full-time, part-time) part-time	
No. of hours Lecture: 10 Classes: 10 Laboratory: - Project/seminars: -		No. of credits 3
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art social sciences Economics		ECTS distribution (number and %) 3 100% 3 100%
Responsible for subject / lecturer: dr hab. inż. Agnieszka Misztal email: agnieszka.misztal@put.poznan.pl tel. 61 665 34 37 Wydział Inżynierii Zarządzania ul. Strzelecka 11 60-965 Poznań		Responsible for subject / lecturer: dr inż Małgorzata Jasiulewicz-Kaczmarek email: malgorzata.jasiulewicz-kaczmarek@put.poznan.pl tel. 61 665 34 65 Wydział Inżynierii Zarządzania ul. Strzelecka 11 60-965 Poznań
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Student has a basic knowledge of systems theory, mathematical statistics, elements of the systemic approach to pro quality management
2	Skills	The student is able to discern system, technical, organisational and economic aspects of the pro quality management
3	Social competencies	The student is aware of the need fro engineering development to pro quality systems
Assumptions and objectives of the course: The students are given the educational content relating to engineering aspects of pro quality systems, in particular as regards the quality assessment, the methods of the products? quality control level and critical points of process control as well as their supervision		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. Has knowledge of quality, quality planning, inspection and quality control - [K2A_W01]		
2. Has knowledge of legal norms, standards and their impact on the organization - [K2A_W01, K2A_W12]		
Skills:		
1. Can characterize typical engineering tools in quality management - [K2A_U02]		
2. Can discern systemic, non-technical, organisational, socio-economical and economical aspects - [K2A_U06]		
3. Can notice cause and effect dependences dealing with basic engineering problems that regard to quality management system objectives - [K2A_U06]		
Social competencies:		
1. Can detect dependencies in terms of cause and effect consequences in the process of objectives implementation. He can also rank the alternative or competing tasks according to their relevance - [K2A_K03]		
2. Is aware of the interdisciplinary character of knowledge and skills that are needed to solve complex problems of an organization and a necessity to create interdisciplinary teams - [K2A_K06]		
Assessment methods of study outcomes		

<p>Formative assessment:</p> <ul style="list-style-type: none"> - Classes: current assessment tasks solutions during the classes - Lectures: the current assessment of the participation in a discussion on the topics covered during previous lectures <p>Collective assessment:</p> <ul style="list-style-type: none"> - Written test (answers to open questions on the basis of the material covered during the lectures in 14-15 week of a semester) - Subject grade (lectures and classes combined) is an average of the grade from lectures and classes. 		
Course description		
<p>Analysis and risk assessment of the hazards and the effectiveness of the measures. Characteristics and components determining the quality of the products. Evaluation method of the quality level of products. Methods of technical control in the manufacturing process with particular emphasis on the use of resources. Analysis of critical control points and the selection of their supervision means. The use of statistical methods in engineering processes and elements of reliability theory</p> <p>Didactic methods: problem lecture, discussion seminar, case study, lesson, situational method, demonstration method, observation method</p>		
<p>Basic bibliography:</p> <ol style="list-style-type: none"> 1. Prussak W., Jasiulewicz-Kaczmarek M., Elementy inżynierii systemów zarządzania jakością (Elements of the quality management systems engineering), Wyd. Politechniki Poznańskiej, Poznań 2010 2. Hamrol A., Zarządzanie jakością z przykładami (Quality management with examples), PWN, Warszawa 2008 3. Łunarski J., Zarządzanie jakością. Standardy i zasady (Quality management. Standards and policies), WNT, Warszawa 2008 4. Misztal A., Kryteria brzegowe implementacji systemów zarządzania jakością w przedsiębiorstwach branży motoryzacyjnej, Wyd. PP, Poznań 2015.

Result of average student's workload		
Activity	Time (working hours)	
1. Lectures	10	
2. Classes	10	
3. Classes consultation	10	
4. Preparation for classes	15	
5. Preparation for an exam	15	
6. Final exam	2	
Student's workload		
Source of workload	hours	ECTS
Total workload	62	3
Contact hours	32	2
Practical activities	10	1
