

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Computer aided manufacturing		Code 1011105331011115175
Field of study Engineering Management - Part-time studies -	Profile of study (general academic, practical) general academic	Year /Semester 2 / 3
Elective path/specialty Production and Operations Management	Subject offered in: Polish	Course (compulsory, elective) elective
Cycle of study: Second-cycle studies	Form of study (full-time, part-time) part-time	
No. of hours Lecture: 12 Classes: 12 Laboratory: 10 Project/seminars: -		No. of credits 4
Status of the course in the study program (Basic, major, other) other		(university-wide, from another field) university-wide
Education areas and fields of science and art technical sciences Technical sciences		ECTS distribution (number and %) 4 100% 4 100%
Responsible for subject / lecturer: dr dr hab. inż. Marek Fertsch, prof. nadzw. email: marek.fertsch@put.poznan.pl tel. tel. 061 665 34 01 Inżynierii Zarządzania ul. Strzelecka 11, 60-965 Poznań, tel. (61) 665 3374		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Knowledge of the organization of flexible manufacturing systems and modern concepts of production control.
2	Skills	Efficient use of basic computer techniques.
3	Social competencies	Ability to work in a team.
Assumptions and objectives of the course: To acquaint students with the nature and operation of computer-integrated manufacturing systems. Knowing the students the basic features of these systems, their enforcement and the difficulties of this task.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. It has in-depth knowledge of clusters, forms of multinational corporations and virtual enterprises. - [[K2A_W04]]		
2. Has knowledge about the relationship occurring in corporations and holding companies, and in-depth knowledge of organizational relationships that exist between organizational units of the company - [[K2A_W05]]		
3. He knows the way dredged methods and tools for process modeling information - [[K2A_W08]]		
4. He knows the methods modeling tools and decision-making processes - [[K2A_W09]]		
Skills:		
1. Can use theoretical knowledge to describe and analyze the causes and processes and phenomena of social (cultural, political, legal, economic) and is able to formulate their own opinions and choose critical data and methods of analysis - [[K2A_U02]]		
2. Can correctly analyze the causes and course processes and phenomena of social (cultural, political, legal, economic), formulate their own opinions on the subject and put simple hypotheses and verify them - [[K2A_U03]]		
3. Has the ability to use the acquired knowledge in different areas and forms, extended on a critical analysis of the effectiveness and the usefulness of applied knowledge - [[K2A_U06]]		
Social competencies:		

1. It has a sense of responsibility for own work and a willingness to comply with the principles of teamwork and responsibility for jointly implemented tasks - [[S2A_K02]]
2. He can see the cause and effect in the implementation of its goals and define importance of alternative or competitive tasks - [[S2A_K03]]
3. Is aware of interdisciplinary knowledge and skills needed to solve complex problems of organization and the need to create interdisciplinary teams - [[S2A_K06]]

Assessment methods of study outcomes

-Forming Rating:

Rating made on the basis of the project. Rating laboratory based on the student's progress and on the basis of answers to questions concerning the material discussed in previous classes.

Rating summary:

Based on the analyzes (including case studies), assessments and plans and final test.

Course description

-The lecture begins with an explanation of "computer-integrated manufacturing." Discussed are the basic modules of CIM - CAD (computer-aided design, CAPP (computer-aided design technology), CAM (computer aided manufacturing), PPC (production planning), CAQ (computer-aided quality management). The are variants of the individual modules and their possible configurations. presented is the process of implementation of CIM. in some cases discussed are difficulties associated with this process.

During the classes of design students work on design assumptions for the implementation of CIM in the selected company.

In the laboratory students become familiar with the operation of selected modules of CIM.

Teaching methods: conventional specialist lecture, laboratory exercises using a CAD system, team project of a selected module, work with literature

Result of average student's workload

Activity	Time (working hours)
1. Lectures	12
2. Laboratory	10
3. Classes	12
4. Preparation for classes	40
5. Consultations	10
6. Preparation for the exam	10
7. Exam	3
Student's workload	
Source of workload	hours
	ECTS
Total workload	97
	4

Contact hours	47	2
Practical activities	62	2
