

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Elective Course 10		Code 1011104451011144496
Field of study Logistics - Part-time studies - First-cycle	Profile of study (general academic, practical) (brak)	Year /Semester 3 / 5
Elective path/specialty -	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: First-cycle studies	Form of study (full-time, part-time) part-time	
No. of hours Lecture: 10 Classes: - Laboratory: - Project/seminars: 10		No. of credits 2
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art		ECTS distribution (number and %)
Responsible for subject / lecturer: PhD Eng. Magdalena Graczyk-Kucharska email: magdalena.graczyk-kucharska@put.poznan.pl tel. 61 665 34 03 Faculty of Engineering Management ul. Strzelecka 11 60-965 Poznań		Responsible for subject / lecturer: PhD Eng. Rafał Mierziak email: rafal.mierziak@put.poznan.pl tel. 61 665 34 05 Faculty of Engineering Management ul. Strzelecka 11, 60-965 Poznań
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Has basic knowledge of environmental protection, logistics and organization and management sciences.
2	Skills	Can Interpret and describe: phenomena that affect the company, its logistic processes and environmental protection. Can assess the manner of achieving goals while maintaining good relationships with partners and co-workers.
3	Social competencies	Is aware of his/her knowledge of logistics, environmental protection and organization and management sciences and understands and analyses related basic social phenomena.
Assumptions and objectives of the course: The aim of the course is to familiarize students with the nature, objectives and methods of completing ecologically-oriented logistic processes and systems of pro-ecological management of production processes		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. Has a basic knowledge of computer science (information technology), economics and transportation, production management, systems design and ecologistics - [K1A_W10] 2. Knows the basic relationship existing in the logistics and the specific issues (ecologistics) and environmentally friendly supply chain management - [K1A_W14] 3. Can recognize the basic phenomena characteristic of logistics and ecologistics and environmentally friendly production processes management - [K1A_W16] 4. Can make basic relations existing in the logistics, ecologistics and pro-ecological production management - [K1A_W18] 5. Can describe best practices in the management of ekologicistykiecologistics and pro-ecological supply chain management - [K1A_W20] 6. Can describe historical view of ecologistics. - [K1A_W13] 7. Can point basic relations in ecologicistisc including sustainable development and waste logistic systems. - [K1A_W07] 8. Know basic relations in logistics and its details. - [K1A_W14] 9. Can give a definition for logistic and its specific issues including ecologistics. - [K1A_W15]		
Skills:		

<p>1. Can search on the basis of literature and other sources and present in orderly way information on the issue falling within the ekologistics and environmentally friendly supply chain management - [K1A_U01]</p> <p>2. Can present with appropriate means issue falling within the ekologistics relating to environmental protection and logistics - [K1A_U02]</p> <p>3. Has the necessary preparation to work in an industrial environment, and know safety rules for the job in safety problems in ekologistics - [K1A_U11]</p> <p>4. Able to assess in economic terms specific problem, which forms part of ekologistics and environmentally friendly supply chain management - [K1A_U12]</p> <p>5. Can make a critical analysis of the phenomenon within the ekologistics and environmentally friendly supply chain management - [K1A_U13]</p> <p>6. Can design using appropriate methods and techniques for building such a system or process that meets the requirements within the general framework within ekologistics and environmentally friendly supply chain management - [K1A_U16]</p> <p>7. Can choose write methods and tools for looking solutions for defined problem in ekologistic. - [K1A_U15]</p> <p>8. Can define project task regarding ekologistic with the use of analytical, simulations or experimental methods and solve logistic problems and its specific issues (stock management, logistic in the area of distribution, production and supplies, ekologistic) and supply chain management. - [K1A_U09]</p>
<p>Social competencies:</p> <p>1. Is aware of his/her knowledge and skills in the area of environmental protection and logistics, and understands the need for continuous improvement - [K1A_K01]</p> <p>2. Is aware of the importance of eco-friendly approach in management and daily life in maintaining and developing social and economic bonds at different levels - [K1A_K02]</p> <p>3. Is prepared to actively participate in groups and organizations undertaking activities related to environmental protection and recycling of waste materials in the economy - [K1A_K03]</p> <p>4. can correctly identify and resolve the dilemmas associated with the profession of logistics in the ekologistyki - [K1A_K05]</p> <p>5. Is determined to think and act in entrepreneurial way regarding to projected and implemented solutions in ekologistic. - [K1A_K06]</p>

<p>Assessment methods of study outcomes</p>
<p>Forming assesment</p> <p>a) the project- discussion on solutions that wants to propose in the project b) a lecture on the basis of answers to questions concerning the material discussed in the previous lecture</p> <p>summary assesment</p> <p>- labs a) based on a project and public presentation of the results and discussion about them, b) on the basis of the substantive quality of the written raport</p> <p>- in a lecture at the written test</p>
<p>Course description</p>
<p>The course covers the following topics:</p> <ol style="list-style-type: none"> 1) The Framework eco-logistics. 2) Logistics orientation on waste management system. 3) The processes of recycling waste materials in the economy. 4) Ecological balances in logistic systems. 5) Logistics of communal waste disposal. 6) Design of recycling-oriented products. 7) Environment-friendly management systems. 8) Environmental aspects of transport policy of the European Union. <p>DIDACTIC METHODS</p> <ol style="list-style-type: none"> 1) Konventional lecture, work with books, talk, problem lecture. 2) Case study, symulation method. 3) Execrcises, laboratories, project.
