Name of the module/subject			CRIPTION FORM	
Introduction to Engineering			1011101411011120150	
Field of	study		Profile of study (general academic, practical)	Year /Semester
Logistics - Full-time studies - First-cycle stud				1/1
Elective	e path/specialty	-	Subject offered in: Polish	Course (compulsory, elective)
Cycle of	f study:	Fc	orm of study (full-time,part-time)	·
First-cycle studies			full-time	
No. of h	iours			No. of credits
Lectur	Classe	·····	Project/seminars: -	5
Status o	of the course in the study	r program (Basic, major, other)	(university-wide, from another field	
		other	from field	
Education areas and fields of science and art				ECTS distribution (number and %)
technical sciences				5 100%
Resp	onsible for subj	ect / lecturer: R	esponsible for subject /	lecturer:
prof. dr hab. inż. Edwin Tytyk			dr inż. Marcin Butlewski

1. can acquire, integrate, interpret data from literature, database or other properly matched sources, both in English or other foreign language accepted as an international language of communication within Security Engineering, as well as to draw conclusions, formulate and justify opinions - [[K1A_U01]]

2. has self-study ability and comprehends it - [[K1A_U05]]

3. can make use of analytic, simulation and experimental methods to formulate and solve engineering problems - [[K1A_U09]]

4. can, while formulating and solving engineering tasks, discern their systemic and non-technical aspects and also sociotechnical, organisational and economic approach - [[K1A_U10]]

5. can conduct a critical analysis of the ways in which technical solutions function and assess, by means of Security Engineering, the existing technical solutions, in particular machines, equipment, objects, systems, services and processes - [[K1A_U13]]

6. can identify and formulate the specification of simple engineering tasks, that are of practical nature, typical of Security Engineering - [[K1A_U14]]

Social competencies:

1. understands the need and knows means how to self-study (first, second and third cycle studies, postgraduate studies, qualification courses)- improving professional, personal and social competence; can argument the need to learn for the whole life - [[K1A_K01]]

2. is aware of the relevance of the study and understands non-technical aspect as well as the consequences of engineering activity, including its impact on environment and taken responsibility of his decisions - [K1A_K02]]

Assessment methods of study outcomes

-Written and oral exam, written test

Formative assessment:

In regards to practicals - current check of the acquired knowledge and skills learnt during maths and graphics exercises

Collective assessment:

In respect to practicals - final exam on skills learnt during maths and graphics exercises

Considering a lecture - a test based exam within exam session

Course description

-Chosen elements of the history of technology on a background of human evolution and social development. Technological methods concerning materials (e.g. plastic working, founding, machining, heat- and thermo-chemical treatment), energy and information and their technical equipment. Technology in different areas in human activity. Technology and human work. The main problems of the contemporary civilization. Ethical problems of users and creators of technology means and technical devices.
