

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Environmental Chemistry		Code 1010134211010130914
Field of study Environmental Engineering Extramural First-	Profile of study (general academic, practical) (brak)	Year /Semester 1 / 1
Elective path/specialty -	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: First-cycle studies	Form of study (full-time, part-time) part-time	
No. of hours Lecture: 14 Classes: 18 Laboratory: - Project/seminars: -		No. of credits 4
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences Technical sciences		ECTS distribution (number and %) 4 100% 4 100%
Responsible for subject / lecturer: Izabela Kruszelnicka PhD email: e-mail: izabela.kruszelnicka@put.poznan.pl tel. (61) 6653496 Wydział Faculty of Civil and Environmental Engineering Berdychowo 4, 61-118 Poznań		Responsible for subject / lecturer: Izabela Kruszelnicka, PhD email: izabela.kruszelnicka@put.poznan.pl tel. (61) 6653496 Faculty of Civil and Environmental Engineering Berdychowo 4, 61-118 Poznań
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	The knowledge of chemistry at the high school level, the basic level
2	Skills	The solving of equations and systems of algebraic equations, the formulation of the chemical and physico-chemical problems in mathematics languages, solve the simple differential and logarithmic equations
3	Social competencies	The awareness of the need to constantly update and supplement knowledge and skills.
Assumptions and objectives of the course: The aim of the education in the context of this course is to strengthen and broaden the students knowledge of the basic areas of chemistry necessary for further study environmental engineering. The students will have knowledge of the structures and properties of chemical compounds and chemical reactions. They will learn about the factors affecting their reactivity. The students understanding the importance of chemical equilibrium and kinetics of the processes. During the course students will obtain the ability to design and conduct laboratory experiments and analyzing the results. The students will be write based on literature about the problems in the basic and physical chemistry.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. The student knows the basic concepts and laws of chemistry - [K_W01, K_W03,]		
2. The student has knowledge of the properties of the substance depending on the type of bonds present in the intra- and intermolecular reactions. The student know the types of the inorganic compounds and the thermodynamic parameters of the chemical reaction. The student understand the impact of concentration, temperature and catalyst on the rate of chemical reactions - [K_W01, K_W03]		
3. The student knows the principles and methods of computational chemistry (chemical laws, formulas and chemical equations, concepts: the concentration of solutions and reactions in solutions) - [K_W01, K_W03, K_W07]		
4. The student knows and understands the chemical phenomena occurring in the environment - [K_W01, K_W03, K_W07,]		
5. The student has knowledge of the ways and methods of prevention and reduction of the chemical contaminants in the environment - [K_W05, K_W06, K_W07]		
Skills:		

1. The student is able to obtain information on the chemical subjects from the literature, databases and other sources - [K_U01]
2. The student is able to perceive the relationship between the structure of the substance and its physical and chemical properties; The student can balance reaction equations with redox reactions. He is able to calculations molar and percentage concentration, determination of pH, distinguishes between the basic types of bonds in the molecules. - [K_U01, K_U04, K_U11]
3. The student is able to practically apply the knowledge gained in the description of basic chemical methods for the removing chemical pollutants from the environment. - [K_U01, K_U03 K_U04, K_U08, K_U09,]

Social competencies:

1. The student understands the need for teamwork in solving theoretical and practical problems - [K_K03, K_K04]
2. The student is aware that knowledge of chemistry is necessary in order to properly solve the problems in the profession of the environmental engineer - [K05. K_K07K_]
3. The student sees the need for systematic deepening and broadening its competence - [K_K01]

Assessment methods of study outcomes

Lecture

? 1-piece written final exam time of 45 minutes, the exam includes checking skills (2 tasks), and knowledge test (3 questions); (check the effect W01, W03, W05, W06, W07)

? In addition, continuous assessment for all classes (rewarding activity).

Classes

? 2 mini-written tests during the semester;

? Final written test; (check the effect W01,W07,U04, U011)

? In addition, continuous assessment for all classes (rewarding activity)(check the effect U01,K03, K04, K01).

The possibility of obtaining additional points for the activity in the classroom, especially for:

? reporting any confusion conducting

? propose other ways of solving problems;

? assistance in the improving teaching materials;

? identifying opportunities to improve the teaching process (check the effect K03, K04, K01, K05, K07).

Scale of written evaluations:

50% - 60% sufficient

61% - 70% positive plus

71% - 80% good

81 - 90% good plus

91 - 100% very good

Course description

The Lecture

Basic definitions and laws of chemistry. Elementary particles. Construction of atoms and molecules. Chemical elements. The periodic table of elements. The valence bond theory and the theory of molecular orbitals. The chemical bonds. Electronegativity and polarity. Intermolecular interaction. The chemical reactions and chemical equations. The rate of chemical reactions, the effect of concentration and temperature. Chemical equilibrium. Redox reactions. Electrolytes, dissociation, pH. Solutions and their properties. Fundamentals of electrochemistry: electrochemical series of the metals, galvanic cell, electrolysis. Outline of organic chemistry. Selected groups of organic compounds: hydrocarbons, alcohols, organic acids, amines, thiols, polymers.

Classes

Calculations based on the chemical formula of the compound. molar and procentage concentration, mixing, dilution and increasing the concentration of the solutions. Equilibria in aqueous electrolyte solutions: electrolytic dissociation, the degree of dissociation, ionic product of water, the hydrogen ion exponent - pH. redox reactions

Learning methods: information lecture, lecture with multimedia presentation, problem lecture; tutorials:accounting exercises;

Result of average student's workload		
Activity	Time (working hours)	
1. Participation in lectures	14	
2. Participation in classes	18	
3. Participation in consultations related to the implementation of classes	6	
4. Preparing for the end credits of the classes	38	
5. Preparing for the end credits of the lectures	44	
Student's workload		
Source of workload	hours	ECTS
Total workload	101	4
Contact hours	38	2
Practical activities	18	1
