

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Industrial Water and Wastewater		Code 1010102221010131095
Field of study Environmental Engineering Second-cycle	Profile of study (general academic, practical) (brak)	Year /Semester 1 / 2
Elective path/specialty Water Supply, Water and Soil Protection	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: Second-cycle studies	Form of study (full-time, part-time) full-time	
No. of hours Lecture: 45 Classes: 15 Laboratory: 15 Project/seminars: 15		No. of credits 7
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences Technical sciences		ECTS distribution (number and %) 7 100% 7 100%
Responsible for subject / lecturer: dr inż. Tymoteusz Jaroszyński email: tymoteusz.jaroszynski@put.poznan.pl tel. 616652436 Faculty of Civil and Environmental Engineering ul. Piotrowo 5 60-965 Poznań		Responsible for subject / lecturer: dr hab. inż. Alina Pruss email: alina.pruss@put.poznan.pl tel. 61 665 34 97 Faculty of Civil and Environmental Engineering ul. Piotrowo 5 60-965 Poznań
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Student should have a basic knowledge about water and waste water technology, mathematics, chemistry, fluid mechanics and general knowledge from environmental engineering.
2	Skills	Student should be able to search valuable information and read research articles and reports with understanding. Student should be able to perform mathematical calculations, physical, chemical, mechanics of the fluids and calculation of equipment and facilities of water and wastewater treatment plants.
3	Social competencies	Awareness to constantly update and supplement knowledge and skills.
Assumptions and objectives of the course: - The objective of the course is to broaden the knowledge and skills necessary for the selection of technology methods of basic pollutants removal from industrial water and wastewater.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. Student has structured and theoretically founded knowledge of methods of water treatment and purification of industrial wastewater - [K2_W03, K2_W04, K2_W07]		
2. Student knows the general principle to create technological systems of industrial wastewater treatment depending on the wastewater characterization. - [K2_W04, K2_W07]		
3. Student has an ordered knowledge of design methods of basic technological processes used in the industrial water treatment technology - [K2_W03, K2_W04, K2_W07]		
4. Student knows and understand models of water and wastewater management in municipal-industry agglomerations and industrial plants - [K2_W03, K2_W04, K2_W07]		
Skills:		
1. Student can describe the industrial water treatment technologies and explain the associated physical, chemical and biological processes. - [K2_U09, K2_U10]		
2. Student knows how to design water softening station. - [K2_U01, K2_U12, K2_U18]		
3. Student knows how to do the conception of processes for industrial waste water treatment plant. -- [K2_U01, K2_U12, K2_U18]		
Social competencies:		

1. Student understands the need for teamwork in solving theoretical and practical problems. - [K2_K03] 2. Student understands the different roles in teamwork and the need for information and knowledge exchange in a group work. - [K2_K03, K2_K04]
2. Student understands the different roles in teamwork and the need for information and knowledge exchange in a group work. - [K2_K03, K2_K04]
3. Student understands the need for a systematic deepening and broadening his/her competences. - [K2_K01]

Assessment methods of study outcomes

- Lecture

Written exam - after 5 questions from each part. A total of 10 open questions. For each question the maximum number of points 10. Criteria of evaluation depending on the number of points obtained:

Number of points - rating

91 -100 very good (5.0)

81 - 90 good plus (4,5)

71 - 80 good (4.0)

61 - 70 sufficient plus (3,5)

50 - 60 satisfactory (3.0)

Below 50 points - insufficient (2.0)

- Laboratories (effect U1, K1, K2)

- verification of knowledge and skills necessary for the exercise,

- reporting,

- Activity when exercising.

Project (effect W2, U2, K2)

- checking the progress of the project in each activity,

- putting the project (date of donation given on the thematic card,

- verbal defense of the project (verification of independent design work and acquired skills). Evaluation of the project (70% of the defense rating + 30% of the project)

Classes (effect U3, K1, K2)

- reporting,

- final test (at the end of the semester) on water treatment and wastewater treatment in visited industrial plants

Final score (70% test, 30% report)

Course description

LECTURE - lecture with multimedia presentation, discussion with students

-Industrial water

Basic indicators for determining the quality of the water in the heating and boiler (water stability, stability indices, water corrosivity). Processes and equipment used in industrial water treatment. Water softening methods (thermal and chemical, reagents, water treatment equipment, process parameters), Ion Exchange (range of applications, rules for the operation of equipment for water treatment methods), membrane technology (microfiltration, ultrafiltration, nanofiltration, reverse osmosis, electrodialysis), degassing of water (mechanical, thermal and chemical methods). Water treatment technology for energy purposes. Water quality requirements for energy purposes. Examples of industrial installations: treatment of water for the purposes of district heating, boiler and refrigeration.

Industrial wastewater

Models of water and wastewater management in municipal-industry agglomerations and industrial plants. Criteria and standards of industrial wastewater treatment. General principle to create technological systems of industrial wastewater treatment depending on the wastewater characterization. Processes used in industrial wastewater treatment (physical-chemical processes: neutralization, oxidation, reduction, AOP, chemical precipitation and coagulation; sedimentation, flotation, adsorption; biological processes: anaerobic, aerobic). Characterization of quantity and quality of industrial wastewater in different industrial plants (slaughter-house and meal industry, dairy industry, plants treatment of metals etc) . The creation of appropriate technological systems of water treatment plant with the justification of the solution.

PROJECT

Practical project, individual work, use of various sources of knowledge (photographs, catalog cards, Internet)

Technological design of water softening station to power boilers.

LABORATORY - group work, experience, observation, measurement, solving laboratory tasks

1. Water softening. Chemical precipitation.
2. Ion-exchange processes in industry and energy potentials.

Classes

Technical Tours: visiting industrial facilities for water and wastewater treatment

Result of average student's workload		
Activity	Time (working hours)	
1. Participation in lectures (contact hours)	45	
2. Participation in laboratories (contact hours, practical)	15	
3. Participation in project (contact hours, practical)	15	
4. Participation in classes (contact hours, practical)	15	
5. Design preparation (practical)	30	
6. Design evaluation preparation + oral answer (contact hours)	10	
7. Laboratory evaluation preparation	6	
8. Laboratory results report preparation	4	
9. Design, classes and laboratory problems consulting (contact hours)	7	
10. Exam preparations	25	
11. Exam (contact hours)	3	
Student's workload		
Source of workload	hours	ECTS
Total workload	175	7
Contact hours	100	4
Practical activities	75	3
