

<b>STUDY MODULE DESCRIPTION FORM</b>		
Name of the module/subject <b>Electrical machines and drives in control engineering</b>		Code <b>1010331231010329994</b>
Field of study <b>Automatic Control and Robotics</b>	Profile of study (general academic, practical) <b>general academic</b>	Year /Semester <b>2 / 3</b>
Elective path/specialty <b>-</b>	Subject offered in: <b>Polish</b>	Course (compulsory, elective) <b>obligatory</b>
Cycle of study: <b>First-cycle studies</b>	Form of study (full-time, part-time) <b>full-time</b>	
No. of hours Lecture: <b>30</b> Classes: <b>-</b> Laboratory: <b>-</b> Project/seminars: <b>-</b>		No. of credits <b>3</b>
Status of the course in the study program (Basic, major, other) <b>major</b>		(university-wide, from another field) <b>from field</b>
Education areas and fields of science and art <b>technical sciences</b> <b>Technical sciences</b>		ECTS distribution (number and %) <b>3 100%</b> <b>3 100%</b>
<b>Responsible for subject / lecturer:</b>  Prof. dr hab. inż. Lech Nowak email: lech.nowak@put.poznan.pl tel. 61 665 2380 Wydział Elektryczny ul. Piotrowo 3A, 60-965 Poznań		
<b>Prerequisites in terms of knowledge, skills and social competencies:</b>		
1	<b>Knowledge</b>	Student should have knowledge in chosen branches of physics including the electricity and the magnetism and the knowledge of the theory of electric circuits.
2	<b>Skills</b>	Student is able to obtain information from literature, databases and other sources; has abilities of the self-education for improving qualifications and the update of professional competence.
3	<b>Social competencies</b>	Student is aware of a need to expand his competence and readiness to undertake the cooperation in the team; has an awareness of the importance and understands other aspects of engineering activity, including its influence on the environment.
<b>Assumptions and objectives of the course:</b> Getting to know principles of magnetic circuits analysis. Getting knowledge of operation, characteristics and methods of analysis of: transformers, induction motors, synchronous motors, brushed d.c. motors, electronically commutated motors as well as the other electromechanical converters.		
<b>Study outcomes and reference to the educational results for a field of study</b>		
<b>Knowledge:</b>		
1. The student has a knowledge tied up in the structure, the application and control of the automation and robotics systems - [K_W19++]		
2. Student knows and understands typical engineering technologies, knows and understands principles of the selection of servo- and measuring-testing devices. - [K_W20++]		
<b>Skills:</b>		
1. Student is able to use models of simple electromechanical systems, as well as to use them for analysis and design automations and robotics systems. - [K_U05+++]		
2. Student is able to select the kind and parameters of servo- and measuring system, control unit for the chosen application and to effect their integration in the form of the ultimate measuring-control system. - [K_U17++]		
<b>Social competencies:</b>		
1. Student has an awareness of the need for the professional approach towards technical issues, of meticulous acquainting oneself with documentation and environmental conditions, in which devices and their elements can function - [K_K04++]		
<b>Assessment methods of study outcomes</b>		

<p>Lecture:                  ?constant progress monitoring during all classes (awarding a bonus to the actively participating students),                  ?evaluation of student?s knowledge and skills on a written examination in a form of test.                  Getting additional points for the activity during classes, particularly for:                  ?proposing answers to the questions and tasks presented during the lectures,                  suggestions on how to improve the teaching materials.</p>		
<b>Course description</b>		
<p>Magnetic circuits and transformers. Rotating machine principles: distributed windings, rotating magnetic field and rotating electromotive force. Induction motors: construction, principle of operation, equivalent diagram scheme;, basic characteristics, angular velocity control. Single-phase induction motors. Synchronous machines: construction, principle of operation, phasor diagrams. Permanent magnet motors.. Starting up the synchronous motors. Synchronous motor optimal control. Reluctance motors. The stepper motors The brushed direct current motors: construction, principles of operation, the armature reaction, commutation. The torque-speed characteristic and speed control. The brushed a.c. motors. Brushless direct current motors. Tachometers. Special electromechanical converters.</p> <p>Updating 2017: Electrical machines heating. Operation modes and selection of electric motors.</p> <p>Methods of education:</p> <ul style="list-style-type: none"> <li>- lecture with multimedia presentation supplemented with examples given on the board,</li> <li>- interactive lecture with questions to students,</li> <li>- student activity is taken into account during the course of the assessment process.</li> </ul>

<b>Result of average student's workload</b>		
<b>Activity</b>	<b>Time (working hours)</b>	
1. Participation in the lecture	30	
2. Consultation	5	
3. Preparation for examination	20	
4. Participation in the examination	5	
<b>Student's workload</b>		
<b>Source of workload</b>	<b>hours</b>	<b>ECTS</b>
Total workload	60	3
Contact hours	40	2
Practical activities	0	0
