

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Real-time systems - manufacturing systems		Code 1010334271010335184
Field of study Automatic Control and Robotics	Profile of study (general academic, practical) (brak)	Year /Semester 4 / 7
Elective path/specialty -	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: First-cycle studies	Form of study (full-time, part-time) part-time	
No. of hours Lecture: 22 Classes: - Laboratory: - Project/seminars: 24		No. of credits 5
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art		ECTS distribution (number and %)
Responsible for subject / lecturer: dr inż. Jarosław Warczyński, doc. email: jaroslaw.warczyński@put.poznan.pl tel. 61 665 2374 Faculty of Electrical Engineering ul. Piotrowo 3A 60-965 Poznań		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Student has knowledge in mathematical fields of logic and discrete mathematics necessary to description and analysis of sequential and discrete systems, description of control algorithms and stability analysis of dynamical systems. Student has knowledge in selected fields of physics. Has also systematized knowledge of methods and technics of procedural and object programming.
2	Skills	K_U01: Student is able to gain information from literature, data basis and other springs. Has skills in self-education aimed in leveraging and actuation of professional competences. K_U03: Student can elaborate documentations and presentations of results achieved in solving engineering tasks.
3	Social competencies	K_K01: Student understands and knows possibilities of permanent self-education, leveraging professional and social competences, and can inspire and organize learning process of other persons. K_K04: Student is aware of the necessity of professional approach to technical tasks, closely reading documentations, taking in account environmental conditions for elements and devises to function in. Student is also aware of the necessity to preserve principles of professional ethics, paying regard to different opinions and cultures.
Assumptions and objectives of the course: Acquaintance of the basic knowledge about real-time applications and supporting them real-time operating systems		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. - [K_W13:] - [-]		
2. - [K_W15:] - [-]		
3. - [K_W21:] - [-]		
Skills:		
1. [K_U10:] - [-]		
2. [K_U17:] - [-]		
3. [K_U21:] - [-]		
Social competencies:		
1. [K_K02:] - [-]		
2. - [K_K06:] - [-]		

Assessment methods of study outcomes		
Written tests and laboratory assesment.		
Course description		
The matter of real-time applications and programs for critical applications. Require-ments for real-time operating systems. The architecture of the real-time operating sys-tems. The systems kernel and its functions. Creation of processes and methods of their scheduling. Real-Time Scheduling Algorithms: RMS, EDF, LLF, MLLF, MUF, MMUF. Interprocess communications. Message-passing system. Process Synchronization. Principles of constructing client-server applications. Basic system management func-tions. Contraction of real-time applications. Examples of real-time operating systems: QNX, ECOS, and WXWorks systems.
