

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Selected issues of the theory of circuits		Code 1010325321010324872
Field of study Electrical Engineering	Profile of study (general academic, practical) general academic	Year /Semester 1 / 2
Elective path/specialty -	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: Second-cycle studies	Form of study (full-time, part-time) part-time	
No. of hours Lecture: 20 Classes: 10 Laboratory: 10 Project/seminars: -		No. of credits 4
Status of the course in the study program (Basic, major, other) other		(university-wide, from another field) university-wide
Education areas and fields of science and art technical sciences Technical sciences		ECTS distribution (number and %) 100 4% 100 4%
Responsible for subject / lecturer: dr inż. Krzysztof Budnik email: krzysztof.budnik@put.poznan.pl tel. 616652788 Elektryczny ul. Piotrowo 3A, 60-965 Poznań		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Of the message in mathematics, physics and the theory of circumferences on the first degree level.
2	Skills	Ability of the deepened understanding and interpreting communicated messages and the effective self-education in the field associated with chosen subject.
3	Social competencies	Has an expanded awareness of the need to expand its competence, readiness to work individual and of cooperation in frames of the team.
Assumptions and objectives of the course: Knowing the rules for applying Laplace and Fourier transforms in electrical circuit analysis. Expanding knowledge on the use of transfer function and spectral analysis of electrical circuits. Getting acquainted the rules of fusion the passive two-terminal and nonlinear electric circuits. Understanding the state variables methods of analysis on electrical circuits. Acquainted with the modeling capabilities different types of energy storage in electric circuits.		
Study outcomes and reference to the educational results for a field of study		
Knowledge: 1. to characterize, discreet electric circuits, real circumferences and signals, to describe and to explain laws of both the analysis method of dynamics and the stability of electric circuits, and their synthesis - [K_W02++, K_W04+, K_W06+++] 2. to recognize, and to select appropriate methods of deepened analysis of electric circuits - [K_W04+, K_W09++]		
Skills: 1. to apply the knowledge in the scope of the deepened theory of electric circuits essential to determine real parameters (discreet and random) of electric circuits so as: rates of the stability, powers and their random indicators, transmittance - [K_U02++, K_U03+++, K_U07+] 2. to recruit specialist information from literature and the Internet, to work independently and collectively, independently and collectively to solve problems from the scope of the deepened theory of electric circuits - [K_U01++, K_U02++, K_U07+]		
Social competencies: 1. is able to think and to operate in the enterprising way in the area of widened analysis of electric circuits - [K_K01++, K_K02+]		
Assessment methods of study outcomes		

<p>Lecture: ? the evaluation of the knowledge and abilities of electric circuits demonstrated on a written exam from the theory.</p> <p>Lecture exercises: ? assessing of the ability solving of arithmetic assignments on the scope of analysis electric circuits - checking the ability on every classes and test in the course of the semester.</p> <p>Laboratory exercises: ? the test and awarding a bonus to the essential knowledge of problems for the accomplishment stated in the given area of laboratory tasks, ? evaluation of the knowledge and the abilities associated with the performance of a task exercise.</p> <p>Getting additional points for the activity during classes, particularly too: ? proposing discussing of aspects of the issue, ? effectiveness of applying the acquired knowledge while solving a set problem, ? of the attention associated with improving teaching materials, ? aesthetic care of reports drawn up and tasks - in the framework of the own learning.</p>

Course description

<p>Transient analysis of RLC circuits using Laplace transform (operator model - electrical circuit elements, principles taking into account the initial conditions, fundamental rights and claims in the form of operators circuit theory). Synthesis of passive two-terminal networks (basic task of synthesis, physical ability to implement two-terminal, Cauer method, the method of Foster, energy function, schematics canonical LC circuits, RL and RC). Basics of synthesis of nonlinear electrical circuits. The method of state variables in the analysis of electrical circuits type of stationary and non-stationary (basics elementary, creating the state equation, output equation). Operational and spectral transmittance and its use in circuit analysis. Basics of sensitivity to electrical circuits. Modelling of energy storage systems - electrochemical, supercapacitors and kinetics. The use of modern methods of energy storage in redundant power systems of electrical circuits.</p> <p>Applied methods of education: The lecture with multimedia presentation, including drawings, photographs, animations, films, supplemented with examples given on the whiteboard, taking into account various aspects of the presented issues, including: economic, ecological, legal, social and practical examples known to students in everyday life, presentation of material in association with other objects. Exercises - solving sample tasks on the board, initiating discussion about solutions, Laboratory - instructors detailed review of the reports and discussions about comments, demonstrations, work in teams.</p>

Result of average student's workload

Activity	Time (working hours)
1. participation in lectures	20
2. participation in laboratory classes	10
3. participation in exercise classes	10
4. participation in consulting (lectures)	5
5. participation in consulting (exercise)	5
6. participation in consulting (laboratory)	5
7. preparation to test/exam	20
8. test/exam	5
9. preparation for the laboratory and preparation of the report	20

Student's workload		
Source of workload	hours	ECTS
Total workload	100	4
Contact hours	60	2
Practical activities	35	1
