Assessment methods of study outcomes

Lectures:						
- evaluation of the knowledge with a written test related to the content of lectures (test, computational and problem questions)						
awarding marks in laboratory exercises)						
- continuous estimation in all classes (awarding attendance in lectures, activity a	nd quality of perception	ı).				
Laboratory exercises: - continuous estimating with the tests,						
- awarding the skill increase,						
- the evaluation of knowledge and skills connected with the measuring tasks and	prepared reports					
Getting additional points for the activity during classes, in particular:						
- the efficiency of the use of acquired knowledge to solve a given problem;						
- skill of the co-operation within the team practically realizing a given detailed tas	k in the laboratory;					
- remarks connected with the improvement of didactic materials;						
- the aesthetic qualities of the reports						
Course description						
- Tendency to development in the area of optoelectronics and photonics.						
- Influence of optical radiation on elements of the matter.						
- Selected photoemitters and photodetectors.						
- Basics of laser technique.						
- Fibre-optic cables.						
- Acquisition and transmission of measuring information by optical links.						
- Industrial fiber-optic links.						
- Optoelectronic separation of signals.						
- Accuracy of optoelectronic measurements.
