

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Computer aided design for Electrical Power Engineering		Code 1010322321010314878
Field of study Electrical Engineering	Profile of study (general academic, practical) (brak)	Year /Semester 1 / 2
Elective path/specialty Lighting Engineering	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: Second-cycle studies	Form of study (full-time, part-time) full-time	
No. of hours Lecture: 15 Classes: - Laboratory: 15 Project/seminars: -		No. of credits 2
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences		ECTS distribution (number and %) 2 100%
Responsible for subject / lecturer: Andrzej Trzeciak email: andrzej.trzeciak@put.poznan.pl tel. 61 665 2581 Elektryczny Poznań, ul. Piotrowo 3A		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Basic knowledge in field of Electrical engineering and computer operations.
2	Skills	Effective self-education in study field. Skills in basic operations in computer systems.
3	Social competencies	Student should have consciousness of necessity of improving his competences in innovation technologies for electrical engineering.
Assumptions and objectives of the course: Studies of computer methods in power system and network designing. Computer technology in power system control. Computer decision support systems in power stations and networks.. Mathematic models for power instalations and other elements. Simple optimization problems solutions.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. Knowledge in methodology and principles of modern, automated designing for power engineering objects. - [K_W18+++] 2. Knowledge in decision support and design systems in power plants and power system. - [K_W16++, K_W17+++] 3. Describe and implement numerical analysis methods for modelling physical processes. - [K_W18+++]		
Skills:		
1. Use knowledge of supply structure desingning for electrical power objects, exploitation configuration for normal and failure states and final documentation in european standard. - [K_U11+++ , K_U18++] 2. Use knowledge of the decision and support systems in power plants and power systems. - [K_U07+++ , K_U13+++] 3. Ability to numeric modelling methods in insulation systems. - [K_U07+++]		
Social competencies:		
1. One has an awareness of usage of modern methods for designing and high-class solutions. - [K_K01+] 2. One has an awareness of economic and social acceptance for the choosen technical solution. - [K_K02+]		
Assessment methods of study outcomes		
- assessment of knowledge on final test, - assessment of knowledge and skills on the basis of test consisting on solving of design problem. - permanent assessment on lectures and laboratories.		

Course description		
<p>Lecture: Power flow, voltage levels and power losses calculations. Short-circuit calculations in power networks. Substation and distribution network designing supported by Siemens Simaris Design system. Power unit as control object. Power unit control systems. Thermal power station work simulation.</p> <p>Update 2017: Fuel cells modeling</p> <p>Laboratory: Practical studies linked with lecture.</p> <p>Applied training methods Lecture: the theory of the closely related to practice, Multimedia lecture Laboratory: Team programming</p>

Result of average student's workload		
Activity	Time (working hours)	
1. Participation in lectures	15	
2. Participation in laboratory	15	
3. Consultations	5	
4. Preparaton to laboratory classes and report realisation	20	
5. Preparation to final test	6	
6. Final test	2	
Student's workload		
Source of workload	hours	ECTS
Total workload	63	2
Contact hours	37	1
Practical activities	75	2
