Lecture:

? the evaluation of the knowledge and abilities of electric circuits demonstrated on a written exam from the theory.

Lecture exercises:

? assessing of the ability solving of arithmetic assignments on the scope of analysis electric circuits - checking the ability on every classes and 2 tests in the course of the semester.

Laboratory exercises:

? the test and awarding a bonus to the essential knowledge of problems for the accomplishment stated in the given area of laboratory tasks,

? evaluation of the knowledge and the abilities associated with the performance of a task exercise.

Getting additional points for the activity during classes, particularly too:

? proposing discussing of aspects of the issue,

? effectiveness of applying the acquired knowledge while solving a set problem,

? of the attention associated with improving teaching materials,

? aesthetic care of reports drawn up and tasks - in the framework of the own learning.

Course description

Method of symmetrical components. Linear electric circuits with periodic electricities deformed in the equilibrium (the use of a Fourier series, powers, analysis methods). Classic method analyses of transitional states in linear arrangements (the comutation rights, the initial conditions, the transient and set components, a fixed time constant). Two port netwoorks (equations, types, ways to connect) and passive filters of LC and RC types (construction, parameters, types, frequency characteristics, application. Solving calculation tasks related to the analysis of electrical circuits with nonsinusoidal periodic electric current, transient states and determining parameters of passive two port network parameters.

Applied methods of education:

Lectures - Lecture with multimedia presentations (including: drawings, photos, animations, videos) supplemented by examples given on the board; having regard to (taking into account) the various aspects of the presented issues, including: economic, environmental, legal and social; presenting a new topic preceded by a reminder of related content, known to students from other subjects,

Exercises - solving sample tasks on the board, initiating discussion about solutions,

Laboratory - instructors detailed review of the reports and discussions about comments , demonstrations, work in teams.

Result of average student's workload

Activity	Time (working hours)
1. participation in lectures	30
2. participation in laboratory classes	30
3. participation in exercise classes	30
4. participation in consulting (lectures)	8
5. participation in consulting (exercise)	8
6. participation in consulting (laboratory)	8
7. preparation to test/exam	35
8. test/exam	2
9. preparation for the laboratory and preparation of the report	25
