

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Computer aided calculations and decision making in power		Code 1010315411010315649
Field of study Power Engineering	Profile of study (general academic, practical) (brak)	Year /Semester 1 / 1
Elective path/specialty -	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: Second-cycle studies	Form of study (full-time, part-time) part-time	
No. of hours Lecture: 10 Classes: - Laboratory: 5 Project/seminars: -		No. of credits 3
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences		ECTS distribution (number and %) 3 100%
Responsible for subject / lecturer: Andrzej Trzeciak email: andrzej.trzeciak@put.poznan.pl tel. 61 665 2581 Elektryczny Poznań, ul. Piotrowo 3A		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Basic knowledge in field of electrical engineering, power engineering and computer operations.
2	Skills	Effective self-education in study field. Skills in basic operations in computer systems.
3	Social competencies	Student should have consciousness of necessity of improving his competences in innovation technologies for electrical engineering.
Assumptions and objectives of the course: Studies of computer methods in power system, power plants and network designing. Computer technology in power system control. Computer decision support systems in power stations, power plants and networks. Mathematic models for power instalations and other elements. Simle optimization problems solutions.		
Study outcomes and reference to the educational results for a field of study		
Knowledge: 1. Knowledge in methodology and principles of modern, automated designing for power engineering objects and power plants. - [K_W04+++, K_W15++, K_W18++] 2. Knowledge in decision support and design systems in power plants and power system. - [K_W04+++, K_W13+++] 3. Knowledge in basis of computer modelling for substations, electrical networks and distributed generation. - [K_W04+++, K_W08++]		
Skills: 1. Use knowledge of supply structure desingning for electrical power objects, exploitation configuration for normal and failure states and final documentation in european standard. - [K_U04++, K_U06+++, K_U08+++] 2. Ability to implementation expert and design tools for determination of secure exploitation parameters for network and systems cooperated with power and distributed generation. - [K_U04++, K_U13++] 3. Use knowledge of the simple optimization solutions in field of electrical power engineering. - [K_U06+++, K_U09++]		
Social competencies: 1. One has an awareness of usage of modern methods for designing and high-class solutions. - [K_K02+++] 2. One has an awareness of economic and social acceptance for the choosen technical solution. - [K_K01+++]		
Assessment methods of study outcomes		

<ul style="list-style-type: none"> - assessment of knowledge on final exam, - assessment of knowledge and skills on the basis of test consisting on solving of design problems in laboratory. - permanent assessment on lectures and laboratories. 		
Course description		
<p>Lecture: Power flow, voltage levels and power losses calculations. Substation and distribution network with distribution generation.</p> <p>Laboratory: Practical studies linked with lecture.</p> <p>Applied training methods: Lecture: the theory of the closely related to practice, Multimedia lecture Laboratory: Computational experiments, working in a team</p>

Result of average student's workload		
Activity	Time (working hours)	
1. Participation in lectures	10	
2. Participation in laboratory classes	5	
3. Consultations	5	
4. Preparaton to laboratory classes and report realisation	15	
5. Preparation to final test	6	
6. Final test	2	
Student's workload		
Source of workload	hours	ECTS
Total workload	43	3
Contact hours	22	1
Practical activities	20	1
