

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Mathematical modelling of power engineering installations		Code 1010322421010325648
Field of study Power Engineering	Profile of study (general academic, practical) (brak)	Year /Semester 1 / 2
Elective path/specialty Ecological Source of Electrical Energy	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: Second-cycle studies	Form of study (full-time, part-time) full-time	
No. of hours Lecture: 15 Classes: - Laboratory: 15 Project/seminars: -		No. of credits 1
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences Technical sciences		ECTS distribution (number and %) 1 100% 1 100%
Responsible for subject / lecturer: Dr inż. Arkadiusz Dobrzycki email: arkadiusz.dobrzycki@put.poznan.pl tel. 616652685 Elektryczny ul. Piotrowo 3A, 60-965 Poznań		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Basic knowledge of electrical engineering, power engineering.
2	Skills	Ability to use a spreadsheet. Ability to effectively self-education in a field related to the chosen field of study.
3	Social competencies	Is aware of the need to broaden their competence, willingness to work together as a team.
Assumptions and objectives of the course: Knowledge of the principles of construction, modeling, calculation, design and operation of electrical systems and networks. Applied methods of teaching: lectures - multimedia presentations (including drawings, photos, animations, sound, films) supplemented by examples given on the whiteboard, interactive lecture with questions to students or specific students, lecture initiation of discussion, consideration of various aspects of the presented issues, including: economic, ecological, legal, social, etc., presentation of a new topic preceded by a reminder of related content known to students from other subjects; laboratory - demonstrations, detailed review of the reports by the lab leader and commentary discussions, team work.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. It has a basic and systematic knowledge of the modeling of power system components. - [K_W04+++,K_W14+]		
2. He knows the rules for calculating the effects of faults in the power system, such as short circuits. - [K_W04+++,K_W15+]		
Skills:		
1. Equivalent circuit is able to develop and analyze the transition state in the power system for a given configuration. - [KU_07+++, KU_10+]		
2. It can use existing software or develop a proprietary computer program to analyze the transition state in the power system. - [KU_08++]		
Social competencies:		
1. Is aware of the responsibility of a power engineer in particular the impact of its activities on the security, including the state, linked to the occurrence of faults in the power system. - [K_K02+]		

Assessment methods of study outcomes

<p>Lecture: ? assess the knowledge and skills listed on the written exam, ? continuous evaluation for each course (rewarding activity and quality perception).</p> <p>Laboratory: ? rewarding the knowledge necessary for the accomplishment of problems in the area of laboratory tasks, ? continuous evaluation for each course - rewarding gain skills they met the principles and methods ? assessment of knowledge and skills related to the implementation of the tasks your practice, including an assessment report on the performed exercise.</p> <p>Get extra points for the activity in the classroom, and in particular for: ? propose to discuss further aspects of the subject; ? the effectiveness of the application of the knowledge gained during solving the given problem.</p>		
Course description		
<p>Determination of mathematical models of electric power systems and networks. Calculation of steady state and transient processes and forecasting, calculation and optimization of load distribution. Calculation of short-circuit currents. The choice of system components.</p>		
Basic bibliography:

Result of average student's workload		
Activity	Time (working hours)	
1. participation in lectures	15	
2. participation in laboratory classes	15	
3. participate into consultations concerning the lecture	2	
4. participate into consultations concerning the laboratory classes	2	
5. preparation to laboratory classes	5	
6. preparation of laboratory reports	8	
7. prepare for the exam	5	
8. completion of laboratory classes	2	
9. participation in exam	2	
Student's workload		
Source of workload	hours	ECTS
Total workload	56	1
Contact hours	38	1
Practical activities	34	1
