|   | ,                          | s of knowledge, skills an       | d social competencies:   |   |  |
| 1   | Knowledge                  | Rudimentary knowledge of prob   | ability theory and technology fund   | amentals  |  |
| 2   | Skills                     | Solving easy exercises in proba | bility   |   |  |
| 3   | Social competencies        | Ability to work in a group      |  |   |  |
| Assumptions and objectives of the course:   |                            |                                 |  |   |  |
| Understanding of certain concepts such as: threat and risk, ability to identify and assess the criticality of events that exist in working environment.; ability to assess risk by means of quality and quantity methods (selection of an appropriate method)             |                            |                                 |  |   |  |
|   | Study outco                | mes and reference to the        | educational results for a  | field of study  |  |
| Knov  | /ledge:                    |                                 |  |   |  |
| 1. Kno<br>Skills  | ws risk assessment m       | ethods - [K1A_W09]              |  |   |  |
| 1. When formulating and solving engineering tasks, a student can discern their systemic and non-technical aspects -   |                            |                                 |  |   |  |
| [K1A_U10] 2. Knows safety rules connected with work in an industrial environment - [K1A_U11]  |                            |                                 |  |   |  |
| Social competencies:  |                            |                                 |  |   |  |
| 1. Understands the need to make progress, gain knowledge and acquire new skills - [K1A_K01]   |                            |                                 |  |   |  |
| 2. Understands the influence of engineering activity on an environment - [K1A_K02]  |                            |                                 |  |   |  |
| Assessment methods of study outcomes  |                            |                                 |  |   |  |
|   |                            |                                 |  |   |  |

| b) Lectures: evaluations based on questions relating to the presented materials during the current and previous lectures  |  |  |  |  |  |
|---|--|--|--|--|--|
|   |  |  |  |  |  |
|   |  |  |  |  |  |
| a) Classes: reports presentation (based on classes);  |  |  |  |  |  |
| b) Lectures: written test (4 open questions presented during the lecture; the final test pass equals at least 3.0   |  |  |  |  |  |
|   |  |  |  |  |  |
| Concepts of risk, misfortunes, initiating events, critical events. Classification of threats. Potential threats. Workplace accidents, failures. Threat assessment and inconveniences in a workplace, industry and services. Occupational risk, process risk, environmental risk. Heuristic methods of risk assessment. Risk estimation. Risk assessment by means of matrix, indicative and graphic methods. Delineating safety loss. Multidimensional risk assessment. Assessment of risk acceptability based on probabilistic methods. |  |  |  |  |  |
|   |  |  |  |  |  |
|   |  |  |  |  |  |
