Wydział Inżynierii Zarządzania Faculty of Engineering Management ul. Strzelecka 11 60-965 Poznań ul. Strzelecka 11 60-965 Poznań				
Prerequisites in terms of knowledge, skills and social competencies:				
Frerequisites in terms of knowledge, skins and social competencies.				
1 Knowledge Student knows the basic concepts of the fundamentals of management, logistics bases, basic computer, basic inventory management, basic operational and supply chain understand the mechanisms of management,				
SkillsStudent has the ability to perceive, to associate and interpret phenomena in organizations can take advantage of the fundamental technologies for the management				
Social Student is aware of the consequences of their decisions and is prepared to take on social responsibility for decisions				
Assumptions and objectives of the course:				
Obtain the skills and competencies in the design of logistics processes and management.				
Study outcomes and reference to the educational results for a field of study				
Knowledge:				
1. Student can define the purpose and scope, which includes the design of logistics processes, know how to identify basi relations existing in the design process - [K1A_W14]				
2. Student is able to explain the basic concepts, including the design of logistics processes - [K1A_W15]				
3. Student is able to recognize the basic phenomena, including process design - [K1A_W16]				
4. Has knowledge of available simulation packages - [K1A_W17]				
5. Has knowledge of the methods and techniques of process improvement - [K1A_W18]				
6. Knows the concept design review processes using simulation experiments - [K1A_W20] Skills:				
1. Can design process analysis in the consideration of the problem and formulate the problem as a task object design (engineering) [K1A_U05]				
2. Can analyze and assess the scope and need for simulation techniques in the design of logistics processes and to interpret				
and verify the results obtained from simulation experiments - [K1A_U09]				
 and verify the results obtained from simulation experiments - [K1A_U09] 3. Can choose the appropriate tools and methods to solve the problem of logistics processes and design using appropria 				

20

30

28

2

Student is willing to cooperate and work in groups on problems related to the design of logistics processes - [K1A_K03]
 He can see cause-and-effect relationships in the implementation of the set objectives and range an importance tasks during the implementation of projects of simulation - [K1A_K04]

Assessment methods of study outcomes		
Forming rating		
a. Laboratory - assessment of the ability to build a simulation model of the logistics process, assessmen evaluation of the report	t of the model,	
b. Lectures - case study on building a model (map) of process flow - evaluation of a report from a case s	study	
Summary rating		
a. Lectures - written exam in the form of open and closed questions, checking the knowledge gained du lecture, Forming rating	ring the	
a. Laboratory - assessment of the ability to build a simulation model of the logistics process, assessmen evaluation of the report	t of the model,	
b. Lectures - case study on building a model (map) of process flow - evaluation of a report from a case s	study	
Summary rating		
a. Lectures - written exam in the form of open and closed questions, checking the knowledge gained du	ring the lecture,	
Course description		
- Orientation functional and process in business management. Process approach. Definition and classifi processes. Models and standardization of processes. Process mapping. Designing and implementing processes. Methodology for process improvement. Managing processes. The nature and objectives of m processes. Methodology for process management. The implementation of the process approach in the organization of the process in the company. Methodology for process management.	rocess changes. nanagement	
Teaching methods: informative lecture, laboratory method		
Basic bibliography:		
1. Logistics An Introduction to Supply Chain Management, Waters. D., Palgrave Macmillan, 2003		
2. Reengineering, Reformowanie procesów biznesowych w przedsiębiorstwie,, Pacholski, L., Cempel, V WPP, Poznań, 2009	V., Pawlewski P.,	
3. Procesy i projekty logistyczne, Nowosielski S. (red.), Wyd.UE, Wrocław, 2008		
4. Budowa modelu przepływu procesu, (skrypt elektr.), Pawlewski P., IIZ Poznań 2009		
5. Wróbel G. Podstawy symulacji Flexsim 5, Materiały szkoleniowe, Cempel Consulting 2012		
Additional bibliography:		
1. Zarządzanie logistyczne, Coyle J.J., Bardi E.J.,Langley Jr.C.J., PWE, 2002		
2. Wprowadzenie do zarządzania operacjami i łańcuchem dostaw, Bozarth, C., Handfield, R.B., Helion,	2007	
Result of average student's workload		
Activity	Time (working hours)	
1. Lectures	30	
2. Laboratory	15	

Consultation
 Preparing for classes

6. exam

5. Independent student work

Student's workload		
Source of workload	hours	ECTS
Total workload	125	5
Contact hours	67	2
Practical activities	15	1
