

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Concrete Bridges		Code 1010125121010120221
Field of study Structural Engineering	Profile of study (general academic, practical) (brak)	Year /Semester 1 / 2
Elective path/specialty Road-Train Engineering	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: Second-cycle studies	Form of study (full-time, part-time) part-time	
No. of hours Lecture: 12 Classes: 8 Laboratory: - Project/seminars: 10		No. of credits 4
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art technical sciences		ECTS distribution (number and %) 4 100%
Responsible for subject / lecturer: dr inż. Iwona Jankowiak email: iwona.jankowiak@put.poznan.pl tel. 61 647 58 28 Faculty of Civil and Environmental Engineering ul. Piotrowo 5, 60-965 Poznań		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Knowledge of the strength of materials, structural mechanics and concrete structures in the field of engineering degree studies
2	Skills	Skills related to the static calculations and design of reinforced concrete bridge structures, self-learning skills
3	Social competencies	Ability to adapt of the type of any civil engineering structure to the communication requirements and social expectations, respect for the Polish language, understand the need for lifelong learning and group collaboration
Assumptions and objectives of the course: Familiarizing of students with the issues of conceptual design, structural analysis and mechanical design of different types of RC-concrete and prestressed bridges according to the system of European standards PN-EN		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. Student knows the basics of the concrete structures - [K_W05, K_W10] 2. Student knows the basics of technology of different types of concrete structures used in civil engineering - [K_W07, K_W09] 3. Student knows the procedure for the static-strength calculations of concrete structures according to the system of the PN-EN code - [K_W06]		
Skills:		
1. Student can structurally form simple concrete bridge structures - [K_U07] 2. Students can perform static-strength calculations of simple concrete bridge structure - [K_U02, K_U04] 3. Student can conduct calculations in accordance with the principles set out in the new system of European standards PN-EN - [K_U08]		
Social competencies:		
1. Student can adapt the type of structure to the communication requirements and social expectations - [K_K08] 2. Student can collaborate and work together in a group, is aware of the need for self-education - [K_K01, K_K03] 3. Student complies with the principles of the Polish language and the rules of preparation of technical documentation - [K_K07]		
Assessment methods of study outcomes		

<ol style="list-style-type: none"> 1. Preparation of the design exercise in accordance with guidelines 2. Ongoing monitoring of the student's knowledge on every part of preparation of the design during the consultation 3. Oral test (talk) on completed design (demonstrating knowledge of issues relating to the formulation and calculation of bridge construction in the technology of post-tensioned concrete) 4. Written test of the student's knowledge in the field of material presented during the lectures 		
Course description		
<ol style="list-style-type: none"> 1. Rules of formation of bridge concrete structures 2. Various assembling systems of concrete bridges 3. Dimensioning rules of simple concrete bridge structures according to the PN-EN code 4. Ultimate and serviceability limit states of concrete bridge structures 5. Basic static-strengths calculations of concrete bridge girders 6. Prestressed concrete structures - pre- and post-tensioned concrete structures in civil engineering applications, technology, analysis of losses of prestressing force. 7. Concrete slab decks - the static-strength analysis of bridge decks and cantilevers according to the PN-EN code 		
Basic bibliography:		
<ol style="list-style-type: none"> 1. Arkadiusz Madaj, Witold Wołowicki, Mosty betonowe WKŁ 1980/2002/... 2. Arkadiusz Madaj, Witold Wołowicki, Projektowanie mostów betonowych, WKiŁ Warszawa 2010 3. Andrzej Ajdukiewicz, Jakub Mames, Konstrukcje sprężone, Państwowe Wydawnictwo Naukowe, Warszawa 1979 4. Jacek M. Skarzewski, Witold Wołowicki, Krzysztof Sturzbacher, Mosty sprężone, Przewodnik do ćwiczeń projektowych, Wydawnictwo PP, Poznań, 1989 		
Additional bibliography:

Result of average student's workload		
Activity	Time (working hours)	
1. Participation in lectures	30	
2. Project realization	40	
Student's workload		
Source of workload	hours	ECTS
Total workload	70	4
Contact hours	30	2
Practical activities	20	2
