

| STUDY MODULE DESCRIPTION FORM | | |
|---|---|---|
| Name of the module/subject Diploma Seminar | | Code 1010104191010100109 |
| Field of study Civil Engineering First-cycle Studies | Profile of study (general academic, practical) (brak) | Year /Semester 5 / 9 |
| Elective path/specialty - | Subject offered in: Polish | Course (compulsory, elective) obligatory |
| Cycle of study: First-cycle studies | Form of study (full-time, part-time) part-time | |
| No. of hours Lecture: - Classes: 14 Laboratory: - Project/seminars: - | | No. of credits 2 |
| Status of the course in the study program (Basic, major, other) (brak) | | (university-wide, from another field) (brak) |
| Education areas and fields of science and art | | ECTS distribution (number and %) |
| Responsible for subject / lecturer: | | |
| dr hab. inż. Wojciech Siekierski email: wojciech.siekierski@put.poznan.pl tel. 061 6653-484 Faculty of Civil and Environmental Engineering ul. Piotrowo 5 60-965 Poznań | | |
| Prerequisites in terms of knowledge, skills and social competencies: | | |
| 1 | Knowledge | K_W02 - The student has a basic knowledge in the field of road construction (Soil mechanics, Technology of road materials and Basic of road construction) K_W05 - The student knows the basic methods, techniques, tools and materials used in solving simple engineering tasks. K_W06 - The student has a basic knowledge necessary to understand the social, economic and legal conditions of engineering activity. |
| 2 | Skills | K_U01 ? The student can make an identification and formulate the specification of simple engineering tasks of a practical nature. K_U05 - The student can obtain information from literature, databases and other sources, integrate the received information, make their interpretation, and draw conclusions. K_U09 - The student can make a critical analysis of the methods of operation and evaluate the existing technical solutions. |
| 3 | Social competencies | K_K01 - The student can work independently and collaborate as a team on a designated task. K_K02 - The student can properly identify the priorities for implementation of the task specified by himself or others. |
| Assumptions and objectives of the course: | | |
| To provide knowledge of current engineering and system maintenance, manufacturing of problem solving skills related to the maintenance of roads, both in the maintenance and the maintenance of the current system, prepare the graduate to achieve a visual assessment of the road surface and the choice of measuring devices for assessment of surface and selection maintenance procedures | | |
| Study outcomes and reference to the educational results for a field of study | | |
| Knowledge: | | |
| 1. The student knows the overall technical specifications concerning the road investment works and the technical requirements WT-2010 - [[K_W06]] 2. The student knows the technologies of construction of individual structure courses of the road pavement - [[K_W11]] 3. The student knows the methods of assessment of the technical condition of the road pavements, shoulders and drainage, and the methods of road management - [[K_W14]] 4. The student knows the issues of the current and system maintenance of the technical condition of the elements included in the total land requirement and the technical specifications for road maintenance works - [[K_W15]] 5. The student knows the basic rules of construction, dimensioning and designing of geometric components of road intersections and grade separated junctions - [[K_W16]] | | |
| Skills: | | |

| |
|--|
| <p>1. The student can take advantage of the overall technical specifications to create the detailed technical specifications for road pavement works - [[K_U05]]</p> <p>2. The student can define tasks within the scope of the current road maintenance and pavement management systems (PMS) and appoint a global assessment of the technical condition of the road pavement - [[K_U16]]</p> <p>3. The student can measure the construction components of road intersections and grade separated junctions and design the simple geometric form of intersection, check the visibility and passability at intersections and exits - [[K_U08]]</p> |
| <p>Social competencies:</p> <p>1. The student can formulate opinions on the technical and technological processes in road construction - [[K_K07]]</p> <p>2. The student understands the need to forward knowledge on the technical condition of road pavements and inform the public in a sufficiently convincing manner as the failure or delay of intended pavement maintenance works could affect adversely the condition and usability of the road network - [K_K08]. - [[K_K08]]</p> <p>3. The student understands the need for learning all his life, can inspire and organize the learning process to others - [[K_K03]]</p> |

| Assessment methods of study outcomes | | |
|---|----------------------|------|
| Information about the exam questions and the form of exam is passed on to students during the first lecture. | | |
| Course description | | |
| Graduates familiar with the principles of formal accession to the final exam (terms and conditions). Statutory requirements for the preparation of the thesis, form, scope of work and the time frame. Presentation of the graduates (in the form of a short presentation) topic of your thesis and possible discussion. Presentation by graduates of interesting publications in scientific and technical press is not associated or related to the subject of the diploma and a possible discussion. | | |
