

STUDY MODULE DESCRIPTION FORM		
Name of the module/subject Statistics		Code 1011102211011100139
Field of study Engineering Management - Full-time studies -	Profile of study (general academic, practical) (brak)	Year /Semester 1 / 1
Elective path/specialty Quality Systems and Ergonomics	Subject offered in: Polish	Course (compulsory, elective) obligatory
Cycle of study: Second-cycle studies	Form of study (full-time, part-time) full-time	
No. of hours Lecture: 15 Classes: 15 Laboratory: - Project/seminars: -		No. of credits 3
Status of the course in the study program (Basic, major, other) (brak)		(university-wide, from another field) (brak)
Education areas and fields of science and art		ECTS distribution (number and %)
Responsible for subject / lecturer: dr hab. Karol Andrzejczak email: karol.andrzejczak@put.poznan.pl, tel. +48(61) 665-2815 Wydział Elektryczny ul. Piotrowo 3a, 60-965 Poznań		
Prerequisites in terms of knowledge, skills and social competencies:		
1	Knowledge	Student knows basic knowledge of set theory, logic and mathematical analysis.
2	Skills	Student is able to efficiently draw function graphs, calculate integrals and derivatives
3	Social competencies	Student is aware of the need to deepen their knowledge
Assumptions and objectives of the course: to acquire basic probabilistic and statistical methods and develop the ability to use these methods to solve practical engineering problems.		
Study outcomes and reference to the educational results for a field of study		
Knowledge:		
1. Student knows with in depth methods of collecting data and extracting information hidden in engineering problems. - [[K2A_W11]]		
2. Student has a basic knowledge of probability and mathematical statistics, useful to solve practical engineering problems. - [[K2A_W10]]		
Skills:		
1. Student is able to interpret the information from a sample and to draw conclusions. - [[K2A_U01], [K2A_U02]]		
2. Can formulate their own opinions and obtain statistical data and the method of analysis. - [[K2A_U02]]		
Social competencies:		
1. Student is able to argue the necessity of continuous learning. - [[K2A_K03]]		
2. Is aware of interdisciplinary knowledge and skills needed to solve complex engineering problems. - [[K2A_K06]]		
Assessment methods of study outcomes		

<p>Forming rating: a) auditorium exercises based on the assessment of the current progress of tasks implementation b) understanding of lectures based on answers to questions about the material discussed in previous lectures,</p> <p>Summary rating: a) exercises based on partial grades obtained for solving tasks on exercises or developing a cross-sectional set of issues, b) in the field of lectures: final test covering the scope of the material presented in the lectures</p>		
Course description		
<p>The basic concepts of probability will be discussed i.e.: probability space, random variables, elements of descriptive statistics, distributions of statistics and their practical applications, methods of statistical inference - estimation, hypothesis verification and analysis of correlation and regression.</p> <p>Teaching methods: Lecture - informative lecture Exercises - exercise method</p>

Result of average student's workload		
Activity		Time (working hours)
1. 1.	Lectures participation	15
2. 4.	the study of literature and the development of cross-cutting project	20
3. 2.	Classes participation	15
4. 3.	Cunsultaion and e-consultation	6
5. 5.	preparing to test knowledge or individual project presentation	4
6. 6.	preparation for tutorials	15
Student's workload		
Source of workload	hours	ECTS
Total workload	75	3
Contact hours	34	1
Practical activities	15	1
