

| STUDY MODULE DESCRIPTION FORM | | |
|---|--|---|
| Name of the module/subject Cargo Science | | Code 1010621351010600215 |
| Field of study Transport | Profile of study (general academic, practical) (brak) | Year /Semester 3 / 5 |
| Elective path/specialty Ecology of Transport | Subject offered in: Polish | Course (compulsory, elective) obligatory |
| Cycle of study: First-cycle studies | Form of study (full-time, part-time) full-time | |
| No. of hours Lecture: 2 Classes: - Laboratory: - Project/seminars: - | | No. of credits 2 |
| Status of the course in the study program (Basic, major, other) (brak) | | (university-wide, from another field) (brak) |
| Education areas and fields of science and art | | ECTS distribution (number and %) |
| Responsible for subject / lecturer: | | |
| Adam Redmer PhD (Hab) Eng. email: adam.redmer@put.poznan.pl tel. +48 61 665 21 29 Faculty of Transport Engineering 3 Piotrowo street, 60-965 Poznan, Poland | | |
| Prerequisites in terms of knowledge, skills and social competencies: | | |
| 1 | Knowledge | student has a basic knowledge of logistics (including transportation and warehousing) moreover packaging and physics as well |
| 2 | Skills | student is able to accumulate information, interpret it, reasoning based on it, express and justify opinions, identify, associate and interpret phenomena occurring in a practice |
| 3 | Social competencies | student is aware of the importance and understands non-technical aspects and effects of transportation processes, including those connected with cargos |
| Assumptions and objectives of the course: | | |
| to give to students a basic theoretical and practical knowledge of cargo management as well as methods and techniques of forming, transporting, handling and storing cargo units in connection with a real life solutions allowing for such operations. | | |
| Study outcomes and reference to the educational results for a field of study | | |
| Knowledge: | | |
| 1. Students know the notion, features and types of cargo units. Know types and methods of forming cargo units. - [T1A_W03] | | |
| 2. Students know principles of loading and fastening cargo units on vehicles. Know principles and techniques of cargo units labeling and identification. - [T1A_W03] | | |
| 3. Students know main transportation technologies and associated with them legislative aspects. Know principles of cargo units monitoring during transportation processes and loss and damage procedures. - [T1A_W03] | | |
| Skills: | | |
| 1. Students are able to design transportation processes of selected types of commodities. Are able to select cargo units forming and fastening methods. - [T1A_U01] | | |
| 2. Students are able to assess transportability of cargo units and transportation risks. Are able to select appropriate labeling and identification techniques. - [T1A_U01] | | |
| 3. Students are able to carry out a loss and damage procedure (transportation claim). - [T1A_U01] | | |
| Social competencies: | | |
| 1. Students are aware of the significance of cargo units forming process and risks and responsibilities associated with this. - [T1A_K01] | | |
| 2. Students are aware of potential technical, economic and social effects that an improper / incorrect forming, transportation and storing of cargo units may cause. - [T1A_K02] | | |
| 3. Students are able to develop independently their knowledge of cargo management. - [T1A_K01] | | |

| Assessment methods of study outcomes |
|---|
| A final exam based on the knowledge obtained within the lectures. |
| Course description |
| <p>Cargo management ? introduction to the subject: the essence of the cargo management, cargo units versus commodities, main types of cargo units, transportability, transportation losses and damage risks, shock sensitivity, basic classifications of commodities and cargo units.</p> <p>Caro units: definition, essence and purpose, cargo units forming means and techniques ? classification and types including: boxes, pallets, containers and batches. Stretch wrapping and strapping.</p> <p>Dimensions of cargo units and packages: basic dimension chains, dimension interrelationships of packages and cargo units ? ISO containers, loading parameters of vehicles.</p> <p>Labeling and identification: definition and basic legislative aspects, main types and methods of labeling, labeling of cargo units (pallettes and containers), basic rules of correct labeling, barcodes, logistics label and RFID.</p> <p>Transportation and handling technologies: definition, types and characteristics, selection of an appropriate technology ? general rules, transportation technology for selected types of commodities ? characteristics and techniques, forklifts (technical characteristics, the 13 basic moves, accessories), palette trucks, semi-trailers and trailers, dump trucks.</p> <p>Loads location and securing on vehicles: a load distribution (basic rules, trailer pins, axle loads and their measurement), factors influencing load safety, load securing ? techniques: belts, fasteners, blocking and bracing, anti-sliding mats, dunnage air bags and the 10 rules of the correct load securing in transportation.</p> <p>Legislative basis of transportation of selected types of commodities: transportation law versus loads that require special treatment, main types of loads that require special treatment, perishable goods, dangerous goods, transportation of animals, and oversized loads.</p> <p>Transportation losses and damages: transportation claims, causes and procedures, insurances, loads monitoring.</p> |
