

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Introduction to telecommunications

Course

Field of study

Electrical Engineering

Area of study (specialization)

Level of study

First-cycle studies

Form of study

part-time

Year/Semester

4/7

Profile of study

general academic

Course offered in

polish

Requirements

compulsory

Number of hours

Lecture

20

Laboratory classes

10

Other (e.g. online)

Tutorials

Projects/seminars

Number of credit points

3

Lecturers

Responsible for the course/lecturer:

dr inż. Jerzy Frackowiak

jerzy.frackowiak@put.poznan.pl

tel. 616652693

Wydział Automatyki, Robotyki i Elektrotechniki

ul. Piotrowo 3A, 60-965 Poznań

Responsible for the course/lecturer:

Prerequisites

Knowledge in mathematics (including series of trigonometric functions with fixed coefficients - Fourier), basics of computer science, electromagnetic field

Course objective

Understanding theoretical and practical issues related to the basic techniques of information transmission in wired and wireless telecommunications systems. Introduction to the issue of waves and antennas and radio transmission systems. Acquiring practical skills in measuring and analyzing parameters: antenna systems, transmission lines and examples of analog and digital filters.

Course-related learning outcomes

Knowledge

Analog and digital modulation methods

the need to use sampling, quantization, coding and signal modulation processes in information transmission

description and construction of analog (passive and active) and digital filters

antenna types and their parameters

Skills

define the concepts of sampling, quantization and coding of signals in data transmission, interpret frequency spectra of signals, apply knowledge of the basic range of analog and digital modulation

Social competences

ability to work in a team, openness to the use of modern telecommunications techniques

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture: assessment of knowledge and skills demonstrated during the combined exam: test and problem 90 minutes

Laboratory: reports on laboratory exercises

Programme content

Introduction to information theory, types of telecommunications systems, analogue signal processing (discretization, quantization), spectral representation of signals, analogue modulation techniques, pulse modulation, noise and their significance in data transmission in telecommunications systems, analogue and digital low-pass filters, measurements of selected parameters and antenna characteristics.

Teaching methods

Lecture: multimedia presentation (including drawings, photos, animations, films) supplemented with examples given on the board

Laboratory:

Exercise 1. Analog (AM, FM) and digital (BASK, BPSK, BFSK) modulations

Exercise 2. Analog active low-pass filter

Exercise 3. Frequency analysis of selected electrical signals

Exercise 4. Directional characteristics of selected antennas

performance of reports on exercises performed, assessment of reports by the laboratory leader, discussions on comments, work in teams.

Breakdown of average student's workload

	Hours	ECTS
Total workload	45	3,0
Classes requiring direct contact with the teacher	35	2,0
Student's own work (literature studies, preparation for laboratory classes/tutorials, preparation for tests/exam, project preparation) ¹	10	1,0

¹ delete or add other activities as appropriate
